MS SQL Migration to Azure

Standardised database migrations.

Our **migrate** and **manage** approach for databases

Database Assessment

Scaling from single database to large data estates, our database assessment will provide detailed information about the cloud readiness of your databases.

Database Migration

Using the assessment data for design, we lift-and-shift, rehost or replatform your databases to Azure.

Managed Services

We'll stay with you even after the migrations have been completed. Our Managed Cloud DBA will continue to manage and optimise your cloud-based data estate.
