

ARTIFICIAL

YOUR LAB, DIGITIZED.

THE ARTIFICIAL PRODUCT SUITE

Artificial is a suite of unified applications that orchestrates your entire lab so you have one, easy-to-use platform to operate your lab efficiently, reliably, and error-free.

With Labs, Assistants, and Workflows, you digitize your lab and its operations so you can run and orchestrate your entire lab with LabOps.

Labs ⁰¹

Digitize your physical lab

Assistants ⁰²

Design digital assistants

Workflows ⁰³

Define your workflows

LabOps ⁰⁴

Run & orchestrate

Labs⁰¹

Build your lab's Digital Twin as the first step to creating an accessible automation experience

SIMPLE DRAG & DROP

Building your lab's Digital Twin is easy with Labs. Simply drag & drop instruments and labware from the Artificial Equipment Library to create your lab's Digital Twin.

BUILT WITH AN ONTOLOGY

Every model in your Digital Twin is encoded with *common sense lab physics* such as its kinematics, capabilities, configurability, and labware compatibility.

YOUR WORKCELL'S BLUEPRINT

If your system's set-up changes or you're planning a new workcell, Labs enables you to easily modify an existing Digital Twin or build a new one in real-time.

Assistants ⁰²

Transform your paper SOP into an interactive, digital assistant that is synchronized with your automation

TRAIN MORE PEOPLE, FASTER

Assistants enables anyone to operate your system. Every step is linked to your lab's Digital Twin and can be customized with photos, videos, warnings, and data fields.

DIGITIZE YOUR PROTOCOLS

Assistants includes a built-in editor so that you can easily create and modify your Assistants in real-time to support new workflows or modified operations, and prevent errors.

AUTOMATICALLY LOG MANUAL STEPS

Every action you take with an Assistant is automatically logged in Artificial so you know who completed each step and when it was completed.

Workflows ⁰³

Connect your lab's software, hardware, people, and data to one platform to create a streamlined workflow

A LIBRARY OF ADAPTORS

Artificial has a library of fully extensible adaptors so it is easy to connect to your lab's software whether it is your liquid handler, local scheduler, or LIMS.

AUTOMATED & MANUAL TOGETHER

With Workflows, you can configure your experiment to include both manual and automated processes so Assistants are automatically scheduled with each job.

FLEXIBILITY AT SCALE

With Artificial's open API library, it is easy to adjust for changes in your software and hardware tools as your processes adapt and your lab scales operations.

LabOps ⁰⁴

Orchestrate your entire lab with one interface that can request, schedule, and monitor your entire workflow

REQUESTS & RESULTS TOGETHER

With LabOps, you can directly submit requests with the Planning Dashboard or sync them from your LIMS so your requests are on the same platform as your results.

SCHEDULE & OPTIMIZE WITH EASE

With LabOps, anyone can easily schedule manual and automated steps as a single job or batch them to reduce time, costs, and errors.

OPERATE FROM ANYWHERE

LabOps provides a single interface for submitting requests, scheduling jobs, and monitoring workflows for all of your systems from anywhere at any time.
