

# Smart Data Capture

## Drastically reduce your manual form processing

As part of our productivity-focused Smart Action Suite, Smart Data Capture is a data capturing solution developed by Version 1 Innovation Labs, which uses intelligent OCR (Optical Character Recognition) and Image Processing to interpret and understand imported documents.

The application scans documents, quickly matching typed and handwritten text to the expected fields of a form. An intuitive User Interface provides the capability for the user to quickly review and correct the processed documents.

To increase efficiency, validation rules can be applied to fields, helping the user quickly identify the incorrect fields and rectify them. This ensures better accuracy and overall performance.

Smart Data Capture builds upon Cloud Partner technology using Machine Learning and Artificial Intelligence. It wraps with Version 1 IP to enable this unique workflow experience. This drastically reduces the manual effort needed to process documents as well as reducing human error, a side effect of repetitive and monotonous data entry.

### Use Cases

- Bulk written form processing
- Email attachment processing
- Logistics: Purchase orders and delivery notes
- Invoice processing

### Highlights

- Operational efficiencies: Enables staff to focus on more valuable work
- Reduces Form Processing Costs
- Auto document classification
- Reduced risk of human error due to data input transcription errors
- Fully customisable validation rules
- Easily integrate in your system
- Low Running Costs
