## TCS MasterCraft | TransformPlus

Due to rapidly growing business requirements and end user's demands for latest technologies like cloud, mobile, social media integration and analytics, companies apparently face multiple challenges with their legacy IT application landscape. After taking into account the various factors involved, a decision has to be made whether to re-develop, re-platform, re-architect or retire these legacy applications. Enterprises are looking at solutions which can help them with

- Automated & Seamless Transformation
- Move towards newer technologies - modernization
- Digitization & Web enablement
- Information and data standardization

TransformPlus is an integrated platform with intelligent automation tools to drive/assist enterprise legacy modernization journey. It enables the enterprises to execute their modernization initiatives at lower risk, lower cost and higher speed.

### Reverse Engineering Edition

An automated solution and intelligence platform that helps enterprises overcome the challenges related to the analysis and maintenance of their legacy applications across multiple technologies.

The offering helps analyze the code assets and uncover the insights that help organizations to attain the competitive edge. It also presents enterprises with a detailed analysis of their legacy applications.

### **For Application Modernization**

Enterprises can understand the starting point and the goal of their legacy modernization journey. It

has the capability to analyze and understand the current state of the legacy system, the business requirements and the outcomes of the modern system helping enterprises with a 360-degree overview of what runs in the legacy system today and chalk out a detailed and robust strategy for modernization.

### **For Application Maintenance**

Helps organizations understand what is held in their legacy applications, helping them to estimate the cost, effort and time for legacy modernization. The product helps enterprises to understand the call flow across the legacy application.

## Application Modernization Edition

A platform for enterprises to choose the right option from re-platform, re-architect, remediate and re-engineer to help your applications reap the fruits of the latest IT paradigms, making them future-ready.

### ***For Application Modernization***

Addresses legacy modernization scenarios from legacy technologies to newer platforms. The offering improves productivity and reduces risks. It supports Language Conversion, Platform Migration, Database Conversion and Field Expansion scenarios.

### ***For Application Upgrade***

Helps enterprises move existing data and business processes from legacy to modern platforms.

## Application Cloud Migration Edition

Move applications to the cloud using an intelligent automation platform that offers an impact analysis engine to drive migration decisions and an automated remediation platform that leverages decades of TCS experiential knowledge

## Forward Engineering Edition

Supports the development of functionally complex, large, multi-tier database-centric business

applications, and browser & mobile application development for on premise as well as cloud based containerized deployments. A component-based and repository-centric development methodology is at the core of Forward Engineering edition.

## Data Transformation Edition

Design and execute Data Transformation/ Migration, especially for Legacy Application Modernization. This includes capturing metadata of both source, target systems, Mapping the source, target attributes and translation of the mappings & transformation rules into target.

### ***For Data Migration***

Helps enterprises addresses the data migration platform acts as a one-stop workbench and governance platform for executing Data Migration engagements that compliment other ETL products available in the market.

### ***For Data Extraction***

Presents a common framework that assimilates planning, scoping, clustering, sequencing, cutover/implementation and any project management activity related to databases.
