

EnviroSys 9.2 Release Overview

EnviroSys 9.2 delivers greater security and more user requested enhancements to continue making EnviroSys easier to learn, use and manage.

In this latest version user requested enhancements and security updates are key to delivering a greater user experience. Improvements have been made to data loading features, sample management and security.

Key feature benefits in the latest release help you:

- ✓ Save time loading data into EnviroSys with more streamlined data feed administration.
- ✓ Secure your environmental data with security improvements and platform updates.
- ✓ Manage and trace samples better with new label printing.

Streamlined environmental data loading

EnviroSys 9.2 saves you time administering data feeds and ensures environmental data professionals' deliver data to the right people when it's needed.

Updates to the Test Method mapping feature simplifies data feed administration and reduces the time environmental professionals spend on solving parameter naming issues. It's easier to view and solve any parameter mapping issues, and once fixed, won't repeat the issue for future data loads.

Location mapping has also been added to EnviroSys 9.2. This new feature:

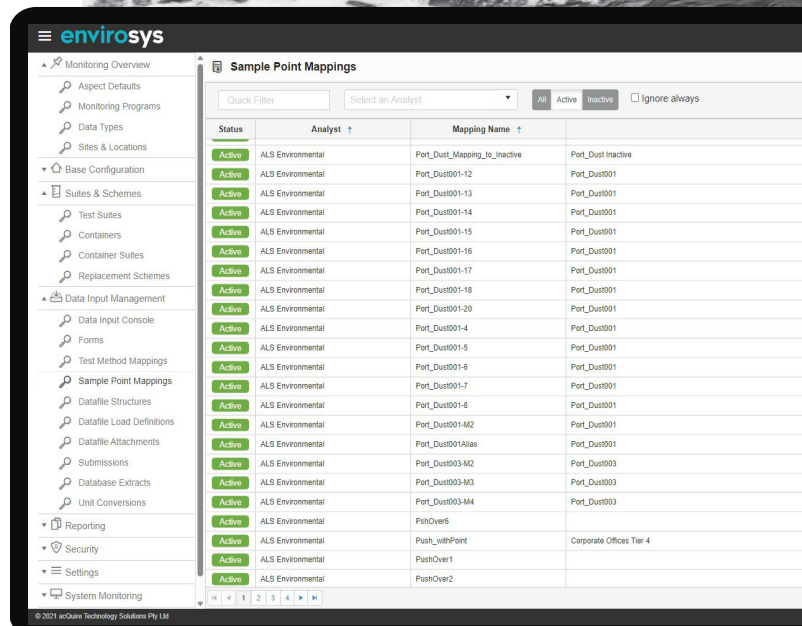

- ✓ provides tools to manage location mapping
- ✓ enables you to create location mappings from an awaiting review data load
- ✓ allows you to apply location mapping corrections to ongoing data feeds.

Increased security for your peace of mind

Security improvements and platform updates to EnviroSys 9.2 strengthens security compliance giving you greater peace of mind over your data. Improved login options include multifactor authentication plus updated Office 365 login integration to the Microsoft Authentication Library which is available for EnviroSys' web and mobile applications. These important updates are aimed at reducing security risks and strengthening your security compliance.

Manage and trace your samples with new label printing

It's now easier to manage and trace your sample containers by producing sample labels directly within EnviroSys. Create standardised labels with all the required sampling run details included, export to pdf and print. This makes it easier to ensure your samples are identified and traced correctly to ensure chain of custody.

Next Steps

Read EnviroSys 9.2 Product Information

Read detailed EnviroSys 9.2 Product Information, including technical release notes, through our [Knowledge Base](#). If you don't have a login, please request one [here](#).

Schedule your upgrade

Our Support team will reach out to your EnviroSys Key Technical Contact to schedule your upgrade at a time that suits you best.

Alternatively, if you're ready to get started now, please reach out to us at envirosys.support@acquire.com.au.

EnviroSys is currently supported for version(s) 9.0 and above. If you are using versions 8.5 and below, we highly recommend upgrading to the latest release.

Update your EnviroSys mobile app

Your EnviroSys mobile app has also received an update! Simply update to access all the latest enhancements and take EnviroSys on the go.
