

# Data landscape assessment

Service offering

Contact [info@cloubis.be](mailto:info@cloubis.be) for more info!

## 01 Value drivers

- > Data is one of the most valuable assets in an organization. Therefore, it is crucial to build upon a solid foundation to make sure you can rely on your data for your operational – and strategical insights.
- > During this **3-day journey**, we evaluate your data landscape (AS-IS) and conduct collaborative workshops to determine and describe your ideal TO-BE situation, using Microsoft Azure as foundation.

## 02 Proposed trajectory

- > An **introductory meeting** will be organised to align on the key-objectives of the assessment. Please note that the assessment is tailor-made to the situation of the customer and therefore, the exact scope of the assessment will be determined during this meeting.
- > During the **data platform workshop**, we will explain key data platform concepts and would like to reflect on the strategy, architecture and design principles that have been used during the initial data – and reporting set-up. Furthermore, requirements of the ideal Microsoft Azure cloud platform will be derived during this workshop (both on a technical - and functional level).
- > **Workshop** focused on **reporting** to review and evaluate the as-is and to-be reporting architecture, data model and get a view on the existing reports, and how they have been set-up. If required, key concepts will be explained in detail.
- > In the **consolidation – and proposal phase** we will document our observations and present you with a comprehensive and actionable plan that addresses your specific needs and objectives (from easy, achievable goals (low-hanging fruit) to more complex or ambitious objectives). The roadmap in this document will leverage Microsoft Azure and can be implemented independently, or in collaboration with our experts.
