POWERED BY ENTELLIFUSION

WHAT'S INVOLVED?

A SUBSCRIPTION BASED FULLY
MANAGED SERVICE...

DEVELOPMENT SUBSCRIPTION

- Define requirements & plan goals
- Stand up infrastructure
- Integrate systems
- Deploy analytic tools
- Dev sprints as needed for progress and scale

OPERATIONAL SUBSCRIPTION

- Turnkey SaaS Capability
- Security & Usage Monitoring
- Data Model Optimization
- Support & Refinement on command
- Hosting on evergreen frameworks

*One source for enterprise wide
advanced analytics.*

BUSINESS INTELLIGENCE AS A SERVICE

Powered by **ENTELLIFUSION™**

EntelliFusion™, now available commercially, has massively scaled across the United States Department of Defense for 20 years. In one instance it successfully manages financial and operational data analytics and decision support by integrating 226 interfaces for over 15,000 users running over 30 million ad-hoc queries annually. It has had 99.99% up time for 15 years proving itself reliable while evergreen – continuously innovated and built on the latest Microsoft technology and frameworks. It is data agnostic, infinitely scalable, and guarantees accuracy and performance to promote end-user tool adoption. We can host it in the cloud or on premise. It is the first place to begin future readiness to facilitate artificial intelligence & machine learning capabilities across an enterprise.

Teksouth offers Business Intelligence as a Service (BlaaS) powered by EntelliFusion™. Through purpose-built solutions, Teksouth bridges the data divide with a platform for the future. BlaaS is a next-gen agile deployment one-stop-shop managed BI solution designed to incorporate self-service BI functionality.

With Teksouth's Business Intelligence as a Service, we outfit the journey to bridge the data divide and ensure successful data driven cultural transformation. We develop, host, maintain and support. Our clients stay lean and focused on their business, make progress continuously with agile development sprints, and reduce the often-unknown capital and operational resources required to make it all work.

simplifying enterprise BI

BRIDGING THE DATA DIVIDE

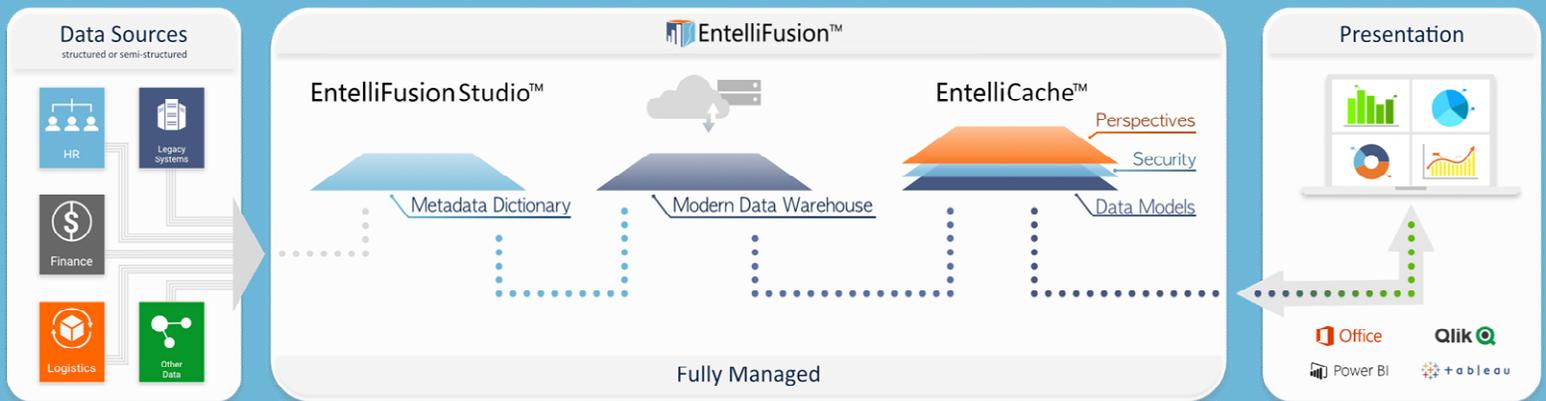

The "3 V's": *volume, variety, velocity*. We've heard this for years, but what does it mean today? It means the same as it did... the amount of data captured by more and more disconnected sources at real or near-real time is greater than any time in history. This also makes the utility of data more opportune than ever. Today's combination of volume, variety and velocity is what we at Teksouth refer to as data overload.

Data overload creates a data divide between those who store & curate data, and those who analyze & share findings. Bridging this divide requires a different understanding of data... A different set of best practices, strategies and processes that make data work for you.

This new vision of data changes expectations. Professionals at all levels now desire to go to work in a data driven culture, cutting through noise and getting to the facts. They need actionable insights. Actionable insights look beyond the numbers. They allow organizations to not only discover problems, but also discover opportunities. Instead of outdated information and manual slide decks, organizations leverage real-time tools with agile business intelligence models.

Actionable insights lead people to the root causes keeping them from achieving their KPIs. This drives organizations to affect the news rather than reporting it. For more than 37 years, we've made it our mission to deliver capabilities that enable our clients to do more than simply "manage" their data, to actually utilize it. Actionable insights require services that are fast, agile, flexible, and innovative and the support of a team of the most seasoned and specialized professionals.

ENTEELLIFUSION... THE POWER BEHIND BLaaS

An enterprise-class, evergreen, infinitely scalable & fully managed decision support platform...
