End-to-End appliance for Video Surveillance

Every device can be integrated to Innodep Cloud Surveillance Solution

Innodep system has no limitation for applying other IoT devices and 3rd party analytics applications. It is available for providing the most intelligent surveillance solution with processing and analyzing various kinds of data on the single system.

Customized Surveillance Solution using Hybrid Cloud Platform

Innodep has extensive partnership pool with hardware, software, cloud infra, and AI services on cloud, so it is available to design the optimized end-to-end system for each customers' needs.
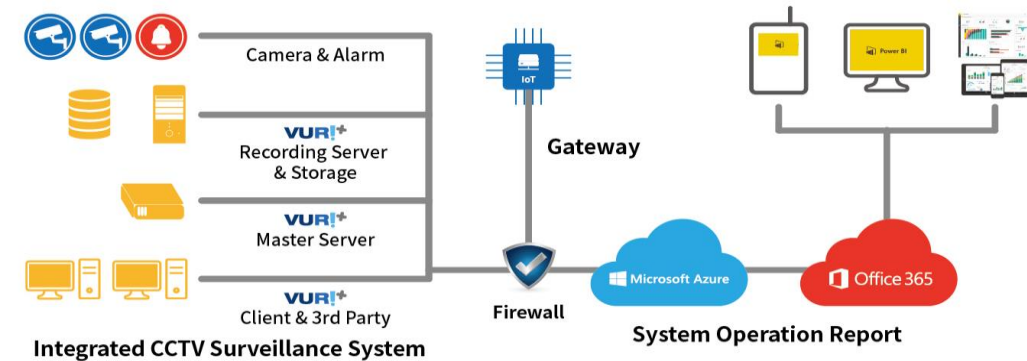

Innodep VURIX solution is for Mobiloud system

It can collect the dispersed data to the cloud infra and manage all for the integrated monitoring. Everywhere, Every time you can manage the client system via various accessing point channels.

CCTV System Operation & Maintenance Solution (BI service)

Customized information with DB and visualized dashboard report from CCTV system operation & maintenance data
(Event records, Device status and information, Map, Recording and Search time information)

Office 365

System Operation Report

BI Service Point

- DB records of operation and maintenance
- Search function for recorded data
- Regular report subscription service
- Customized information based on analysis

Benefits

- Efficient data management with integrating system of collecting, analyzing and reporting
- With search function, available to find important information quickly
- Customers can have only useful processed data using report subscription
- Cost effective for operation and maintenance, with predicting and preventing accident

Intelligent Cognitive & Analysis Solution

Image clip

Analysis result

Analysis service for cognized image, text from CCTV metadata
(Motion, Emotion, Age, Gender, Text, Celebrity, Object)

Cloud CCTV Monitoring (Web / Mobile)

Magnify the accessibility for the system via Web/Mobile app based portal
