AZURE SYNAPSE SQL MONITOR

Azure Synapse SQL Monitor gives you comprehensive insight into your workloads and end-to-end visibility into the performance of your Azure Synapse SQL, helping you to dramatically reduce the time it takes to isolate and fix data warehouse issues.

Existing monitoring solutions are not fully compatible with Azure Synapse SQL and MPP. Synapse Monitor comes with a real-time dashboard, integrated auditing, comprehensive health check with user friendly analysis tools to make DREs and developers' life easy for better productivity.

BENEFITS

- Realtime monitoring of the user activities
- Ability to troubleshoot performance problems on a proactive basis
- Insights into whether and how performance can be improved
- Ability to go back in time to trace the root cause of past issues
- Waits, blocking and locking analysis
- Capacity utilization and forecasting
- Insights into any security flaws
- Identifying the bottlenecks in the cluster

MONITERING
- Usage
- Utilization
- Realtime widgets
- Request processing

AUDITING
- Historical Data
- User activities
- Audit report

HEALTH CHECK
- Detailed health check
- Historical report
- Current health
- Scheduling and offline view

INSIGHTS
- Drill-down analysis
- Performance analysis
- Failure analysis for RCAs
- Historical data analysis

STATISTICS
- Graphical representations
- Request processing errors
- Request processing blockers
- Object level statistics
- Historical data
