About DSI

For over 25 years, Distributed Solutions, Inc. (DSI) has transformed the way our customers do business by successfully implementing innovative software solutions built on our powerful AEON™ platform. AEON solutions integrate with other business systems data, intelligently automate business processes, and provide greater management control and visibility across all business process areas. This enables our customers to work more efficiently and with fewer risks. Coupled with our highly experienced team of consultants, AEON and DSI subject matter experts create automated, knowledge-enabled solutions that deliver results.

AEON—Technology to Empower

AEON is a powerful and secure business process management software platform built on Microsoft technology and configurable to support the automation of project management, document generation, acquisition management, vendor engagement, and financial, deliverable, and audit management using the latest in emerging technologies such as robotic process automation and artificial intelligence. AEON solutions are provided as a Software as a Service (SaaS) and possess powerful integration capabilities to provide uninterrupted business process streams, enterprise-wide management and visibility, control, and deep analytic insights for real-time mission critical decision making.

AEON Features

- › FedRAMP and DoD IL5 Compliant SaaS
- › Workflow Tools
- › Approvals and Collaboration Tools
- › Automated Document Generation
- › Offer Evaluation Tool
- › Funds Management
- › Partner and Vendor Management
- › Actionable Dashboards and Reporting
- › Digital Signature
- › Complete Content Search
- › Market Research Tool
- › AI and Business Analytics
- › Cloud Services

Innovative Technology

AEON Process Automation

A library with thousands of configurable microservices that uses RPA, transaction automation, and data-driven configurations to support any business process.

AEON Integration Capability

DSI solutions come with inherent integration capabilities that can unify processes with existing business systems, financial management systems, and data sources.

Single System of Record

Our integration layer securely and seamlessly shares data with existing software investments, serving as a single system of record to provide visibility throughout your entire process for improved decision-making and cohesive project management.

AEON Solution Areas

AEON tools can be configured to support any complex business process. We tailor our tools to the way your organization works.

Business Process Automation

Key Features

- › Process and tracking visibility
- › Workflow and collaboration
- › Review and approval
- › Document and content management
- › Transaction system of record
- › Funds management

Partner Management

Key features

- › Vendor offer submission
- › Vendor invoice/receipt submission
- › Offer evaluation
- › eDeliverable management

AI and Business Analytics

Key features

- › Insights on private or public data
- › Data and content curation
- › Trend analytics and process learning reports
- › Fraud and anomaly detection

AEON Preconfigured Solutions

Our preconfigured solutions have you up and running faster, and with less downtime. Our model, backed by 25 years of experience, saves you time and money from day one.

Enterprise Management and Visibility

Insight and real-time visibility into core enterprise processes, projects, and activities.

Program Office Management

Planning, management, and collaboration tools to facilitate the successful execution of budget, financial, program, procurement, award and post-award delivery activities.

Contract Writing

Built-in, automated logic and process support, standardize and automate the contract writing process using our unique knowledge-enabled document generation tools for complete, compliant contracts.

Contract Management

Contract administration capabilities, real-time management view, and advanced operational reporting help track and report on all contracts—simple to complex.

Reporting and Reference Platform

Access, analyze, report on, and proactively share information from multiple data sources among project teams and stakeholders faster and with greater accuracy.

AEON Key Differentiators

Configuration

No-code, dynamic configurations support rapid implementation and on-demand customer business changes. Rapid automation of standard business processes reducing manual data entry, saving time and money.

Modularity

AEON's family of software tools can be configured to meet the needs of any complex business process. The tools leverage current customer environments to fill known gaps in legacy business tools and deliver significant process improvements.

Rapid Implementation

DSI's proven methodology quickly and seamlessly modernizes today's busy offices—transforming them from paper to paperless in six months.

Subject Matter Expertise & Professional Services

Our AEON products are supported by a consulting team of subject matter experts focused on delivering solutions that achieve results. We provide these services in conjunction with our core software solutions across the federal government. Standalone services are available for agencies in need of high quality and high-performance IT support.

Key Service Areas

- › IT Professional Services
- › Business Intelligence (analysis, design, implementation)
- › Business Process Engineering
- › Business Analysis
- › Systems Integration
- › Consulting Services (top tier–subject matter expertise)
- › Data (architecture, integration, analysis, design)
- › Architecture (technical solutions)
- › 1102s
- › Program Office Support

Superior Service

Subject Matter Experts

DSI subject matter experts cover business areas such as program office and acquisition management support to business process reengineering, integration, and solutions architecture to help agencies meet their mission, goals, and objectives.

Project Management

Our program and project management support is based on PMI best practices and include Agile, SCRUM, SAFE, SDLC, EVM, Risk Management, Quality Management, and other key areas.

ITIL Compliant

DSI follows ITIL best practices for IT service management and IT service support to ensure that all engagements whether new or in maintenance follow prescribed and repeatable processes.

Customer Success Stories

IT Modernization and Digital Transformation

Process Automation with RPA

Integrating Existing Software Investments

Modernizing IT through Digital Transformation

Office of Justice Programs (OJP)

Challenge	Cumbersome manual paper-based process caused lack of insight and slow contracting processes.
Objective	Provide software and services to transform OJP acquisition processes from paper to a secure SaaS environment, reduce transaction time, and streamline system administration and application management.
Solution strategy	DSI's solution for OJP is fully integrated and includes both the Program Office and Contract Office components of AEON. The solution allows OJP to create and manage requisitions, acquisition plans, solicitations, awards, and post-award activities. The solution also supports contract workload tracking and management, operational reporting, integration with Federal IAE environments, receipt and invoice approvals, and closeout.
Enterprise visibility	This environment allows for rapid visibility into ongoing contracting activities and real-time management oversight.
In action	OJP currently has 300 licensed Program Office Requisition users (which includes COR, Accountants, Finance Office and Reviewers), and 38 licensed Contracting Office users (which includes Contract Specialists, Contract Officers and Reviewers).
Impact	Transformed OJP from paper to paperless in six months, streamlining their acquisition process, while adhering to strict security requirements.

Process Automation Saves Agency Time and Money

Department of Veterans Affairs (VA)

Challenge

Disparate processes and manual data capture across the enterprise led to lower quality information and inconsistent application of best practices.

Objective

Implement one of the largest enterprise acquisition management solutions in the federal civilian agency market, interface with a variety of VA internal and external systems, including Integrated Funds Distribution Control Point Activity, Accounting and Procurement system (IFCAP) and System for Award Management (SAM), and provide VA with a unified acquisition solution for all VA components.

Solution strategy

DSI's solution is being used enterprise-wide to help VA reduce acquisition lifecycle time, achieve greater operational efficiencies, enable process visibility, and improve decision support throughout the acquisition lifecycle.

Enterprise visibility

DSI continues to support VA in operations and maintenance with software upgrades; software maintenance; regulatory updates; help desk support; business process consulting and infrastructure consulting; and training services.

In action

eCMS supports up to 5,000 users and more than 4,400,000 VA documents annually across the entire United States.

Impact

Agile process improvement and automation is driving better outcomes across the entire VA.

Integration of Existing Software Investments into a Unified Modern, Solution

United States Patent and Trademark Office (USPTO)

Challenge	Multiple stove-piped legacy systems with minimal interconnectivity and visibility.
Objective	Deliver a proven integration strategy that allows for solution upgrades without compromising integrations with any other USPTO system.
Solution strategy	The eAcquisition Tool integrates with existing USPTO systems, including CGI's Momentum Financials and Momentum Acquisition, Electronic Library for Financial Management Systems and the Enterprise Data Warehouse. AEON unifies the system, providing stakeholders in both the Program Office and Contracting Office with visibility into the entire acquisition process.
Enterprise visibility	Stakeholders are now aware of the various processes and steps involved, and funding available. The Tool's complete and adaptive integration layer provides USPTO with actionable awareness of acquisition process activities and status across Technical/Program and Contracting Office lines.
In action	DSI's production-proven solution will eventually be used by over 3,000 USPTO users to reduce acquisition lifecycle time, achieve greater operational efficiencies, enable process visibility, and improve decision support throughout the acquisition lifecycle.
Impact	Closed gaps for the existing USPTO software portfolio and added new capabilities for the Program, Contract, and Vendor Communities.

Thank you
