

Manage your Cloud Access Software Deployments

Teradici Cloud Access Manager

Introducing a cloud service that simplifies and automates deployments of Cloud Access Software, the leading PCoIP® solution for remotely hosted enterprise applications. Cloud Access Manager enables highly-scalable and cost-effective Cloud Access Software deployments by managing cloud compute costs and enabling secure user entitlements by brokering PCoIP connections to remote Windows or Linux desktops and workstations, all from a single console.

Manage Cloud Access Software Deployments

- Automatically provision new remote desktops and workstations
- Tap into your existing Active Directory services, eliminate manual configuration tasks and improve administrative efficiency
- Allows for fast and easy evaluation of Cloud Access Software

Scale with Your Business

- Scale remote desktop and workstation resources up or down, effortlessly
- Provision new Linux or Windows desktops and workstations and remove them once no longer required
- Facilitate secure connections between Active Directory users and remote desktops and workstations without users having to memorize machine names or IP addresses
- Provide users access to one or many remote desktops and workstations as desired, easily modifying, adding, or removing user access as needed
- Avoid vendor lock-in with true multicloud support across public, private or hybrid cloud environments, including AWS, Google Cloud, Microsoft Azure and on-premises data centers

Decrease Costs and Manage Cloud Consumption

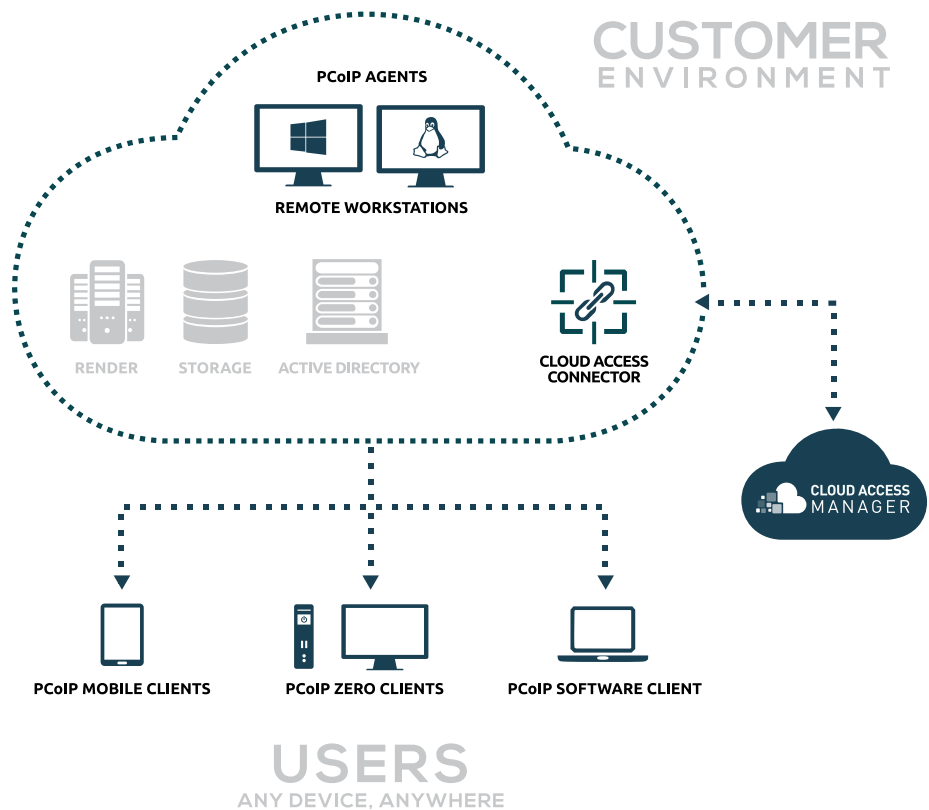

- Actively control up-time service charges for public cloud remote desktops and workstations by automatically turning off machines that are not in active use
- Start up the remote desktop or workstation when a user attempts to connect again

Always Secure

- Enable Multifactor Authentication (MFA) as an added security mechanism
- Other mainstay security features of the PCoIP protocol, such as AES-256 encryption and the PCoIP Security Gateway, always provide a secure architecture independent of MFA settings

"Microsoft and Teradici are assuring that our customers stay at the cutting edge of performance for graphics accelerated applications in the Cloud."
