The new Flight information API

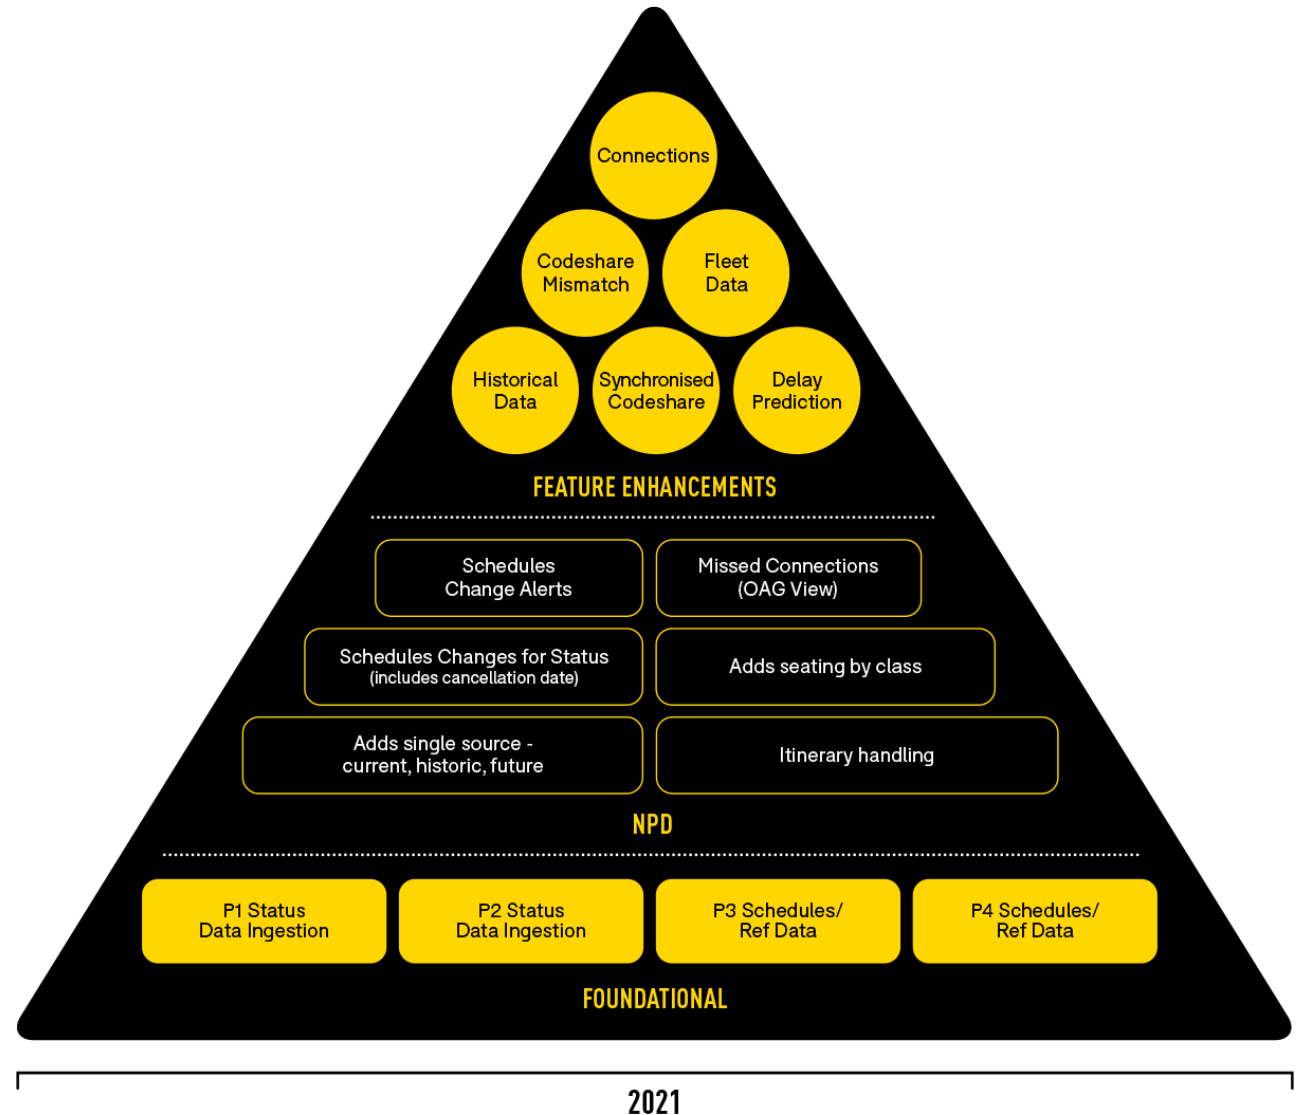

- The new Flight Information API from OAG is a core foundational component of OAG's exciting new cloud-based platform, that will dramatically improve the way we offer and deliver aviation data to our customers.
- Real time, rich schedules data forms the starting point of the new API; and as we progress through 2021 our API offerings will dramatically scale in content and features, including status data, alerts and additional rich feature enhancements.
- The new API is accessed and managed via the new Developer Platform, which enables a self-serve environment.

What data is available?

- Schedules Changes Lookup – Functionality to pull the changes data you want to see, based on chosen filters, including some reference data.
- Calculated Seats Data – Seats data that is enhanced with OAG Reference to fill in gaps not provided by Carriers in their data files

Full list of the 38 Data Fields at launch can be found in the document below:

How it helps you?

- The freshest schedules data in real-time enabling you to confidently feed this data into your own products and processes. The optimal version of the truth to keep you customers updated.
- No time lag or 'snapshot' process to wait for
- Access crucial schedules changes quickly and simply
- Retrieve schedules that were introduced, changed, or deleted from a specific date
- Instant access to test and trial – via OAG Developer Portal with minimal 'human' interaction
- Access all Core Schedules Data prioritised for ingestion- including Calculated Seats Data

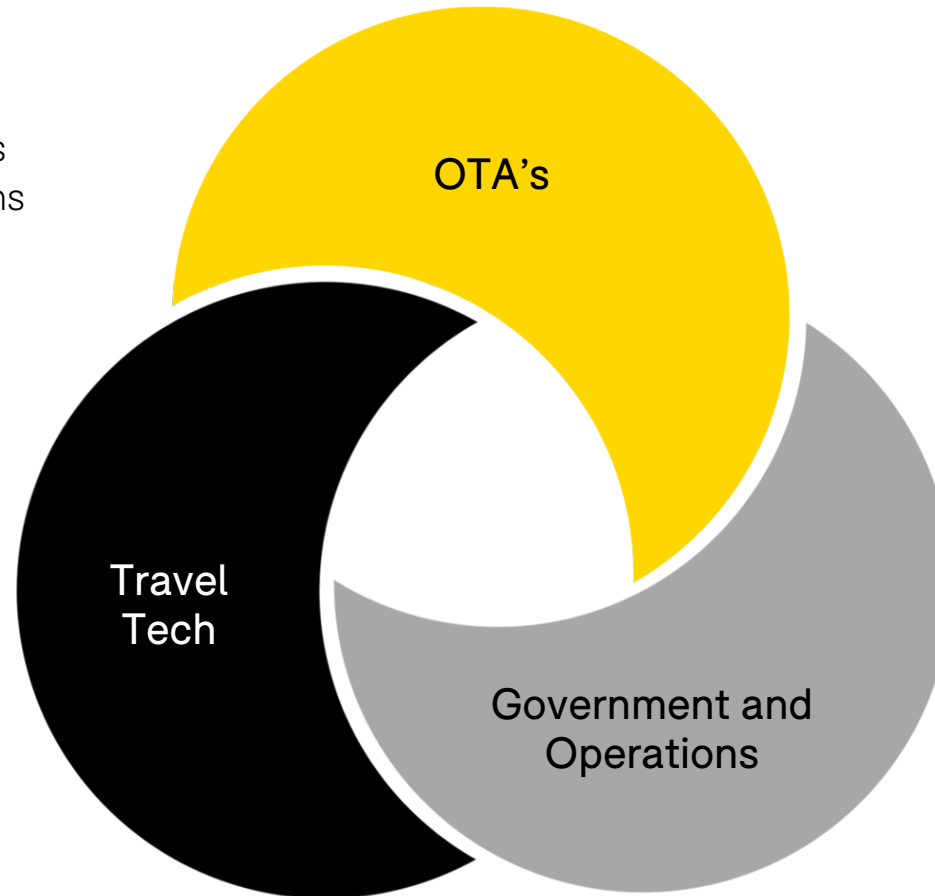

Who can use it?

OTA's/Metasearch/TMCs

- Feed booking systems by pulling with real-time flight schedules information as customers search for direct flight options
- Keep customers informed of any changes (schedules, cancellations in a day of travel) to their upcoming booked travel

Travel Tech

- See any schedule changes that have been made to the flights to plan operational changes better

Government and Operations

- Border control and customs departments who want all flight schedules, for one day of operation, dated 2 days ahead, so that they can create coverage metrics

The Developer Portal

- To support the distribution and adoption of our new Flight Information API we have developed the new Developer Portal.
- Access your 14 day free trial
- Sign up and explore our API's, including request and response examples as well as full interactive user guide documentation (Open API 3.0 Specification)
- User Guide Below
