

What is a Documentbot?

Documentbot is a powerful tool that can read, interpret, and classify documents from various sources. It combines Optical Character Recognition (OCR) and Natural Language Processing (NLP) to automatically process structured and unstructured documents with free-text.

Why use a Documentbot?

Documentbot is a highly suitable AI-solution for businesses that spend multiple hours manually processing documents. Organizations can use Documentbot to optimize their document handling and free-up time that can be better used for more demanding work. It is an off-the-shelf product that requires no coding, little training, and can be easily integrated in your systems using API/RPA.

How does Documentbot work?

Interprets Content

After a document is received, it reads the content and interprets its meaning.

Classifies Documents

Documentbot classifies documents based on subject matter and pre-defined categories.

Extracts Information

After classification, the bot then extracts relevant information from the content.

Facilitates Actions

Based on the content and business rules, the Documentbot can execute further tasks.

Benefits of the Documentbot

Simplifai's Documentbot operates around-the-clock and saves valuable time for your employees.

Works 24/7
through unlimited
capacity

Superfast
document
handling

Flexible to
use and
integrate

Enhances
