5 REASONS WHY YOU NEED

a MiPaaS Solution

ROCK SOLID ERP
ONECONNECT

WHAT IS MIPAAS EXACTLY?

MiPaaS is an acronym for managed integration platform as a service. MiPaaS is a cloud based solution that is designed to integrate disparate software systems across your organization and external software systems.

The key differentiator between MiPaaS and a traditional iPaaS solution is that a MiPaaS solution is fully managed by your vendor. With MiPaaS all integrations are fully implemented, monitored, upgraded, secured, and supported by your vendor.

A MiPaaS solution can also provide additional benefits, such as business process automation, enterprise reporting capabilities, and an overall reduction in cost over tradition iPaaS solutions or even manual integrations.

#1 REDUCE HUMAN ERRORS

HOW A MIPAAS SOLUTION HELPS

Manual integrations can introduce significant hidden costs to you organizations. IT and end users can spend significant time manually manipulating and pushing data between various systems. This leads to a loss of productivity, specialized knowledge, or worse, human introduced errors from manual data manipulation. All of these symptoms represent cost and overhead to your organization that can be eliminated with a MiPaaS solution and gives you assurance that your data is always up to date and is reliable.

#2 REDUCE HIDDEN COSTS

A MiPaaS solution can help eliminate hidden costs that exist in your oganization that you may not even be aware of:

> Reduce IT overhead associated with implementing, maintaining, securing, monitoring, and supporting integrations

> Reduce specialized knowledge required for inhouse integrations or traditional iPaaS platforms

> Reduction in time and effort spent by staff to manually manipulate and import/export data

> Eliminate costs associated with out-of-date or inaccurate data

#3
ENTERPRISE REPORTING

A MiPaaS solution can add value by not only integrating data between two solutions, but also storing data that has been validated and cleansed. Data can be combined across multiple software systesm and stored in a centralized data lake or database that allows for enterprise level reporting across a single data source.

#4 BUSINESS PROCESS AUTOMATION

01
BUSINESS RULE ENGINE

MiPaaS solutions are designed to handle complex business processes and automate tasks between multiple disparate systems and partners.

02
AUTOMATED DATA VALIDATION

MiPaaS solutions are able to detect data validation errors and eliminate issues with bad data across integrated systems

03
DATA TRANSFORMATION

MiPaaS solutions allow any-to-any integrations and are able to extract, transform and load data between any data source and data target.

04
DATA ORCHESTRATION

MiPaaS solution allow flexibility for data orchestration and process scheduling across any integrated system

#5 MANAGED SERVICES

MANAGED IMPLEMENTATION

A MiPaaS solution is implemented by an expert team with experience implementing integrations across a variety of solution sets

CONTINUOUS MONITORING

A MiPaaS solution is continuously monitored for API updates, integration failures, or system downtime

CONTINUOUS SUPPORT

A MiPaaS solution is supported through back end support consultants and automtically corrected in most cases

MANAGED SECURITY

Data security is essential and a MiPaaS solution passes rigourous security and compliance standards
