

Multi-Cloud Cost Management and Billing Platform

Hybr® MXP is a White-labeled SaaS-based Multi-Cloud Cost Management and Billing Platform that helps you manage and automate usage reporting, monitoring, and billing scenarios against your multiple subscriptions across multi clouds such as Azure, AWS, GCP, Azure Stack Hub, Azure Stack HCI, VMware, System Center/ Hyper-V, Open Stack, Veeam, Commvault, Windows Azure Pack, etc., with the built-in charge-back system.

Hybr® MXP helps you track the metered resource consumption across multi-cloud platforms and allows you to chargeback customers based on their usage. It provides precise insights on the historical and current monthly resource usage and costs with a trend analysis report.

Billing for Resellers

The billing solution enables resellers to sell IT and cloud services to the customers by offering the below capabilities.

Pricing Profile - Fixed or Pay as you go model that caters to customer needs

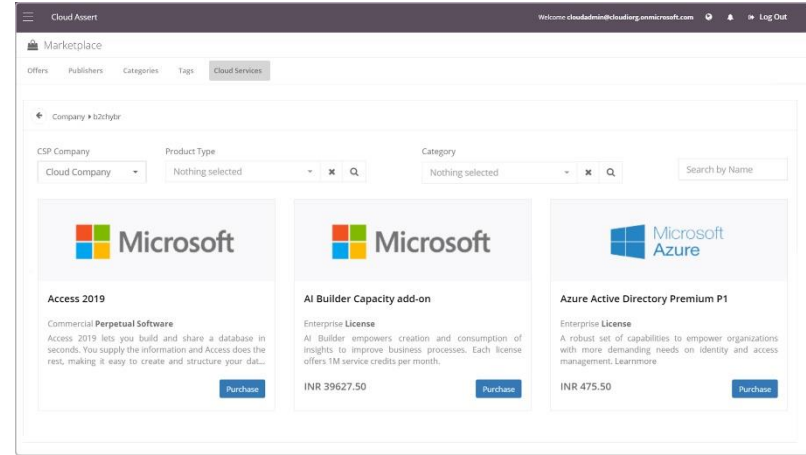

Invoice – Generate unified invoices/bills for the service consumption across multiple clouds

Reports – Customizable reports that help resellers personalize the format and languages

Markups and Promo Credits – Set markups and run promotional discounts against any specific offers and plans

CSP Automation

Hybr® MXP is further extended to act as a CSP Automation platform for Microsoft Cloud Service Providers to sell and provision Office 365, Azure Subscriptions, and other Microsoft Cloud Services with a seamless reseller billing experience from a centralized place.
