

**SOFTMED**  
TECHNOLOGIES

*Software platform for modernizing radiology*

Softmed Technologies (<https://www.softmedtech.com>) is a healthtech startup with a mission to increase access to radiology imaging and improve patient care through integrated digital workflows and faster turnaround times. We provide an innovative software platform leveraging cutting-edge technologies to provide an end-to-end solution for remote radiology image viewing, reporting, and archiving. This secure, cloud-based software platform also enables certified and experienced radiologists to extend their reach to otherwise unreachable patients and provide quick, cost-effective radio-diagnosis. Equipped with advanced tools for managing end-to-end teleradiology operations (including FDA & CE certified DICOM® image viewers), the solution connects medical imaging workflow at point of care on the demand side with radiologists on the supply side. It is OS-agnostic (works with Windows, Linux and Mac) and runs on any HTML5-capable device, including iOS and Android tablets and smartphones. It can be implemented on-premise, on-cloud or a flexible hybrid combination of on-premise PACS with on-cloud teleradiology. It can be customised to accommodate healthcare data interoperability by seamlessly integrating with multiple 3rd party HIS/EMR/LIS systems. It supports VNA (Vendor Neutral Archive) allowing it to seamlessly integrate with any DICOM®-enabled imaging equipment. Our proprietary algorithm allows it to connect to non-DICOM® imaging equipment as well.
