Modelled data / Common data

Business Logic

Extract / Load / Transform / Integration Server / Azure Connector

Conventional IT data	Engineering Data	Operational Data	Public Data	Private Data	Sensor Data	+ +	Data / Source Systems
System data, Equipment data, ERP data, Work orders	Documents, Images	Work orders, Event series	Geo data, Master data, Common data, Weather data	CRM data, Documents	Time series		

Define data sources

Define all data sources and understand your system capabilities to share and receive data (EDI /API) etc.)

Collect & integrate

Ingest data from all your source systems in the format and frequency of choice. Enluminite will develop, maintain and monitor all data connections.

Contextualize

Enluminite's powerful transformation layer refines raw data into business-ready inputs that fuel internal or external systems.

Deploy & share

Synchronize your data operation and execute data pipelines directly on either Enluminite- or external 3rd party applications that match your business needs.
