

Agile & Incremental Digital Transformation

About ShepHertz

- Trusted by **75,000+** registered customers in **150** countries
- Processing **200+ Billion API Calls**
- Large Enterprise customers in BFSI, Retail, Media, Aviation, Real Estate & Gaming
- Multiple years of experience in **Managed Services** on the Cloud with various providers.
- Partnership with largest companies – IaaS, SI/IT Services, Resellers, Advisory cos.
- Providing Products & Solutions since 8+ years
- One of the largest product line in the Cloud & Platform space (PaaS, APIs, DevOps, Real-time Messaging, Actionable BigData, AI & ML)
- Experience across IaaS Providers – AWS, MS Azure, IBM Cloud, VMWare vCloud Air, Alibaba cloud, OnPremise etc.
- Servers in 9 countries

Attendance Management Solution

Conventional vs New-age Attendance Management

Conventional	New-age
<ul style="list-style-type: none">➤ Long Queues & Time taken per person to mark attendance➤ Inconvenience➤ No intruder detection mechanism➤ No full-proof tracking of employees' login hours	<ul style="list-style-type: none">✓ It enhances productivity – Complete track of login time, no. & duration of breaks taken per employee✓ Minimize Fake Visits – Geotagging coupled with face recognition weeds out fake visits by field sales force.✓ Gauge Sentiments – Detect employee's sentiment & proactively counsel him✓ Intruder Detection & Restrictive Access✓ Ease of Use✓ Department wise reports, regular employees or 3rd-party (contractor/vendor) employees.✓ Minimize Spends & thus better resource utilization – HRs/Payroll teams and team leaders can focus on other important tasks.

Employee Attendance via Face Recognition

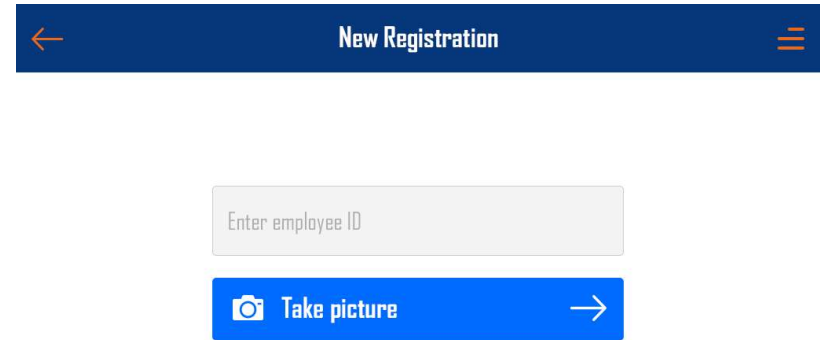

Facial Attendance Solution- Features

Sr. No	Feature	Remarks
1	First In-Out Time	First In and out time is captured for all employees. First capture is the in-time and last capture is the out-time for the day.
2	One time registration/de-registration	System can register and de-register employees centrally upon their joining and exit. Registration/De-registration is a one time activity.
3	Additional employees details for new registration process	System is able to extract additional details of the Newly registered employees from HRMS (if integrated).
4	Emp Code as primary key	System maps captured Face data with the employee code which is unique to each employee. Employee code can be used as the unique identifier for mapping all attendance related data.
5	Geotagging	The system can capture office location along with GPS details of the employees from where he/she is marking the attendance.
6	Device Control	System does not allow attendance to be marked from any unauthorized device other than the ones which are registered with the system.
7	Master Rights	The system provides admin access only to selected officials for employee registration/deregistration. The system also provides reports about list of employees having admin rights along with list of changes done by individual admins.
8	Hardware compatibility	The system is compatible with Android/iOS Mobiles & Tablets.
9	Dashboard/Reports	The system provides a Dashboard view with details such as No. of employees joined/exited this month, daily total no. of punch in/punch out etc. The system is also capable of triggering alerts e.g. in case an employee is absent for more than 5 days the alert can be sent to HR and respective manager
10	Old data	The existing attendance data can be migrated and the new system can provide reports based on it.

Attendance using Commodity/Surveillance Camera

- ShepHertz Face Recognition not only works on Android/iOS Apps but also works on standard Commodity / Surveillance cameras.
- Can analyze Images as well as video stream
- Can interact with automation doors or any other hardware through IoT integration
- Can be deployed in remote locations.

Group attendance – Contact less

Analytics

- Total Punch-in/Punch-out – Daily/Monthly
- Total/Average Working hours
- No. of employees joined/exited in a month
- Time wise - Early Birds, Late Comers, On-Time

Other Indicative Use cases using Face Recognition

- Detect Intruders
 - Unknown people
 - Identifying users who are in a Secured/Restricted Area
 - Detecting suspicious characters
 - People carrying objectionable/dangerous objects e.g. Knife
 - Wearing helmet or covering face e.g. Use case : ATM
 - Not wearing uniform : Use case Manufacturing
- Trigger Notifications/Alerts and Alarms to security
- Automatic locking of Doors in case the intruder is identified – Usecase: IoT
- Analytics
- Detect unusable behavior/Anomaly/Outlier detection : Our of the normal movements.
