BUILDING & CONSTRUCTION

# Trusted By Many

Our platform is used and trusted by fleets and workshops of all sizes, often with multiple depots and locations across the globe.

We started off by looking for a simple to use, but customisable driver defect reporting system and we found that in Tranzaura. We've ended up with a very simple to use product for our drivers, that's well laid out and aligns to our business.

Liam O'Brien, Chief Engineer

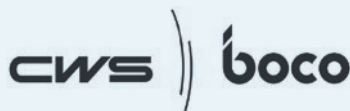

My experience of working with Tranzaura is a very positive one and in the years of working together we have developed an excellent working relationship. This is due to Tranzaura being able to understand what it is that GoAhead London wants to achieve and how our business works and overall being extremely flexible and adaptable in the way they work.

Chris McKeown, Chief Engineer

We've been using Tranzaura for a number of years and they are a really good company to work with. They are really flexible and always looking at new ways of working, new systems, and new solutions that we need. It's the one central portal for compliance for our branch managers and it's very easy to use.

# Bus & Coach

**Helping engineers optimise the use of buses, workshops and drivers with a consolidated digital maintenance management system.**

## KEY BENEFITS:

- 
- **360° view of fleet at any time** Engineers can make real time, more informed decisions from their App, without ever leaving the office, saving massive amounts of time and resources.

---

  - **Improved communications between drivers and engineers** Rather than drivers and engineers acting as siloed entities they will have access to connected dashboards to deal with problems quicker and more efficiently.

---

  - **Cost control and compliance** Full cost control, visibility and traceability of spend and activity across your Fleet, Workshops and Parts.

---

  - **Overall Improved safety outcomes** Minimise inaccurate reporting, reduce loss of information and improve the quality of maintenance activity overall.

---

  - **Better resource planning** Getting all your defects ahead of time makes planning and engineering a lot tighter and gives better visibility of bottle necks.

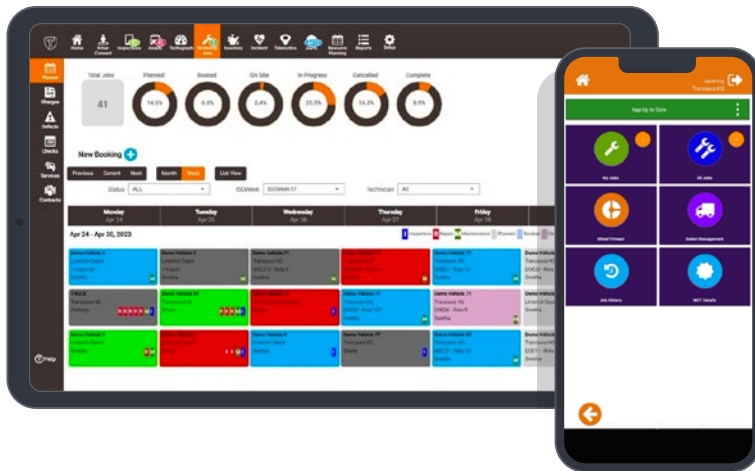

---

  - **Real-time reporting** React straight away to a problem, It no longer takes 36 hours to report and close a defect.

---

  - **Full end to end audit trails** Avoid rifling through thousands of documents in the event of an audit, all information on unplanned and planned maintenance is available.

# All the end user tools for digital maintenance management in one central system.

## FOR ENGINEERS

Engineers have access to an App that fully manages the whole maintenance process which includes asset register, workshop management, scheduling of key safety events and parts and inventory management.

## FOR DRIVERS

Drivers can carry out a thorough digital walk around check using the latest NFC tap technology which is clocked and step counted. Any defects are sent directly to engineers in real time. Defects can be recorded with photos and comments and engineers can access and comment on these in their dashboard.

Full maintenance with asset register, workshop management and parts & inventory

Manage and schedule all key safety events

Pre-use inspections and defect reporting

Dynamic reporting functionality and seamless integration with any 3rd parties

Reduce overall paper load in your bus fleet. You will no longer have to go rifling through thousands of pieces of paper just to find one thing.

# Transport & Distribution

## Total Fleet Compliance and Maintenance for Fleets & Workshops of all sizes.

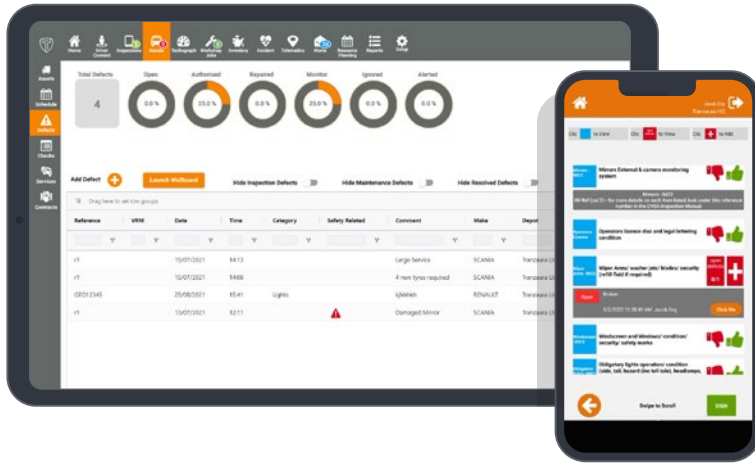

### KEY BENEFITS:

- |  |   |
|--|---|
| ● Complete digital driver management               | Working and driver time directive, digital walk-around check reports and real time defect alerts.                                   |
| ● Daily Compliance & Safety made easy & accessible | See all driver checks carried out and maintenance sign offs in real time from one dashboard and act before situations escalate.     |
| ● Get ahead of your workshop and bottlenecks       | Increase visibility of repairs and maintenance schedules/planning and job tracking through a connected dashboard controlled by you. |
| ● Total asset control at your fingertips           | Manage assets, parts and inventory in real time to improve resource allocation and cost management.                                 |
| ● Improve the way drivers report incidents         | Respond to incidents quicker with real time workflows and easy data capture to reduce vehicle downtime.                             |

We can connect your tracking & telematics information to our platform with our seamless third-party integration tools and then we present the relevant tracking information within our system.

# All the end user tools for total driver and vehicle compliance and fleet maintenance.

## FOR FLEETS AND WORKSHOPS

Complete management software for fleets and maintenance workshops. Get instant real time access on your asset register and workshop maintenance schedules with live information and costs analysis at the click of a button. Minimise stock losses, eliminate billing issues and optimise how labour is allocated.

## FOR FLEETS MANAGERS & DRIVERS

Fleet Managers can optimise the way they manage all driver and vehicle compliance activity within their operation by going paperless. From one real time dashboard, fleets can see driver walkaround checks, defects, and tachograph analysis activity including driver and working time directive. Drivers also have access to their own App to carry out all their compliance obligations from one place.

One dashboard for fleet compliance and maintenance

Holistic view of how fleet and workshop is performing at any given time

Consolidated, accurate reporting across business

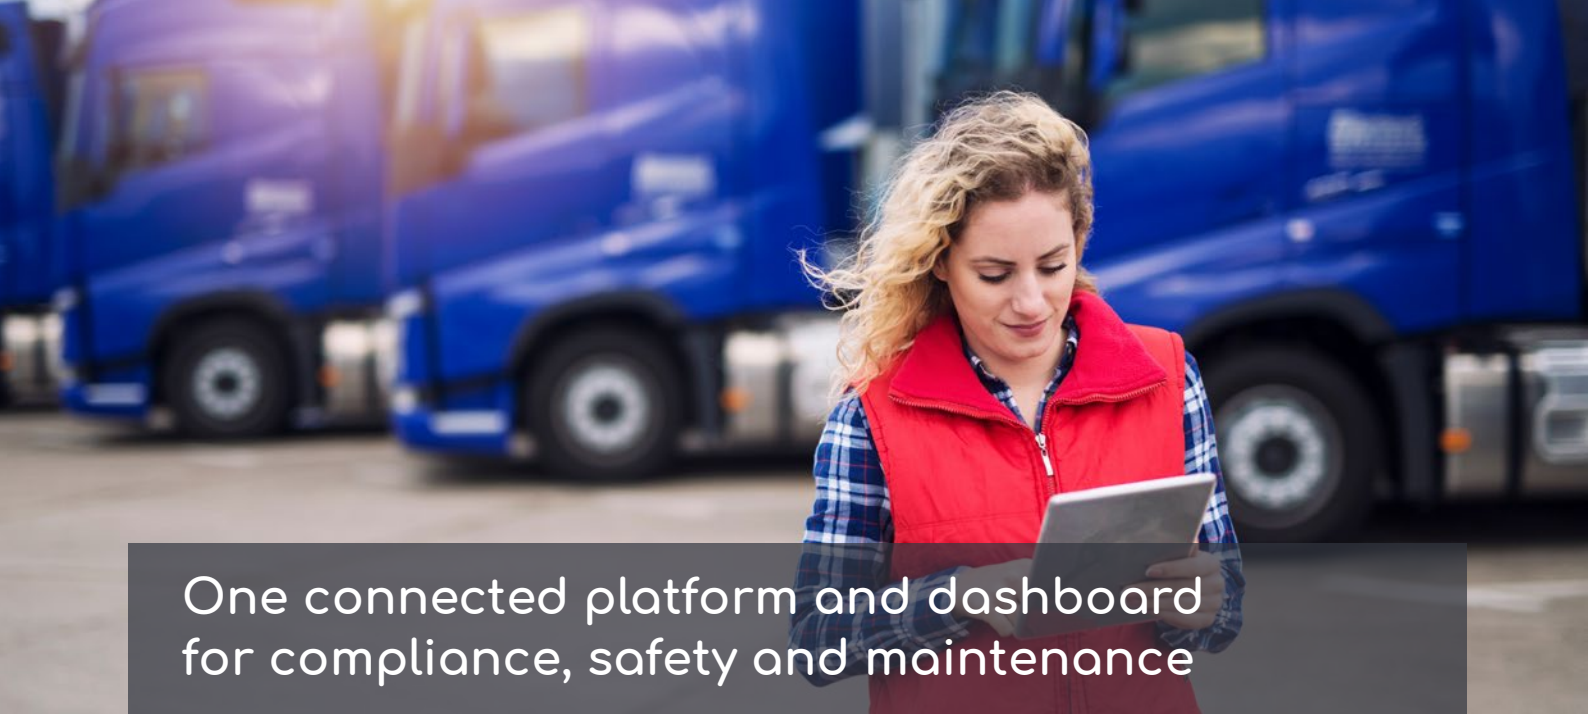

Single source of truth on drivers, assets and the work they are doing

One fleet portal with single sign in for any user

No data duplication or multiple system sign in

# One connected platform and dashboard for compliance, safety and maintenance

## INSPECTIONS

Make your inspection experience a better one, elevating completion rates whilst improving safety. Our solution can be used for walk around checks, management checks, hire/off hire checks or PMIs.

## ASSET MANAGEMENT

Manage all your asset register, workshop management and inventory management requirements in one central place.

## TACHOGRAPH ANALYSIS

Manage and monitor drivers with more precision. We provide a proactive way to make recording hours easier for the driver whilst optimising the way you manage workloads and availability.

## DRIVER CONNECT

Create a more engaged, safer and connected culture for your remote drivers, whilst motivating them to go the extra mile for the business.

## WORKSHOP MANAGEMENT

Proactively manage your maintenance and repair workshop (owned or commercial) to better track preventative maintenance, routine inspections and repairs to ensure vehicles are compliant for the authorities and safe for employees and customers.

## ACCIDENT INCIDENT

Support your remote driver in the event of a road incident, which can be stressful and traumatic. Give your drivers a quick and intuitive way of gathering as much information and detail about an incident whilst it's still fresh in their mind.

## STOCK INVENTORY MANAGEMENT

Streamlining your parts inventory management with our digital solution can be a driving force in meeting your overall cost objectives.

## RESOURCE PLANNING

Our sophisticated cloud-based resource planning solution allows you to seamlessly schedule & track all fleet and equipment activities in one central booking system.

## TRACKING & TELEMATICS

We can connect your tracking & telematics information to our platform with our seamless third party integration.
