Mapping Rules

Use this page to define how data is mapped between systems. The "Rule Name" is for your reference only and will appear as an editable column when you are reviewing imported data.

[+ New Rule](#) [Refresh](#) XERO FTP - CSV

Rule Name	Source Value	Map To			
Maps to Customer	AccountRef	Contacts	Edit maps	Edit	Delete
Maps to Tax Type	TaxCode	TaxTypes	Edit maps	Edit	Delete
Maps to Account Code	NominalCode	AccountCodes	Edit maps	Edit	Delete
Maps to Tracking Category	DepartmentCode	TrackingCategories	Edit maps	Edit	Delete

ACCURATE DATA IMPORT IN 4 STEPS:

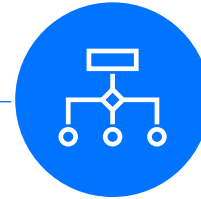

Setup

Once we have set up your account, you can define your mapping rules, connect to your Xero account and configure your preferred import method all within BNS Connect.

Import

Data is imported to the application manually or automatically as defined during setup.

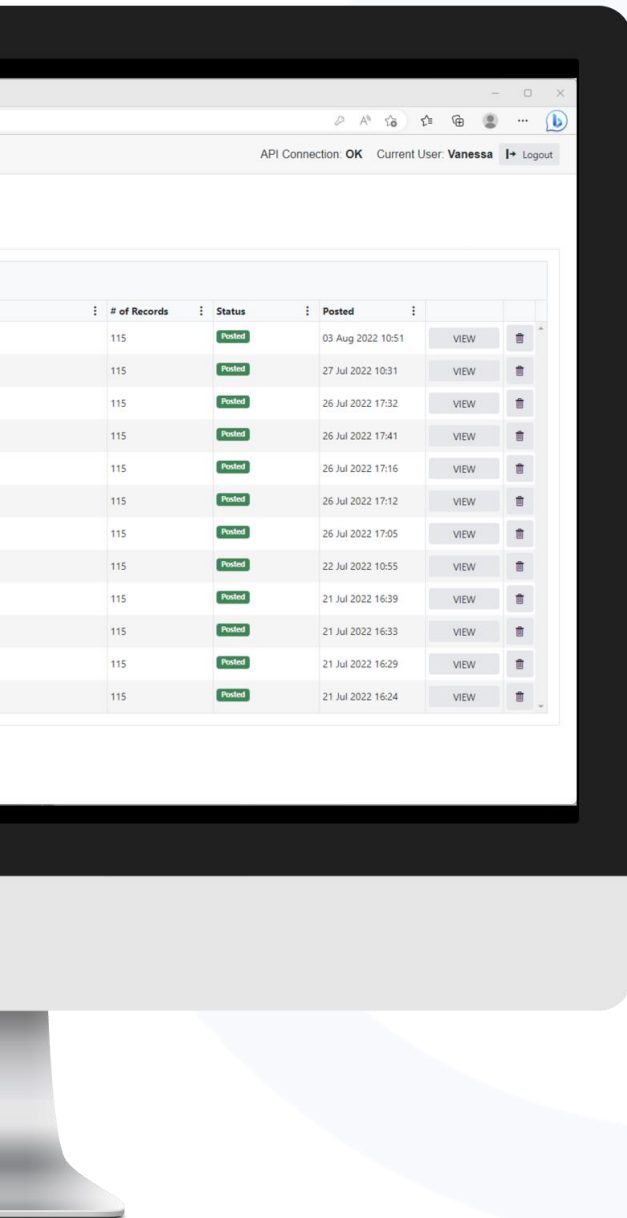

Mapping

Data is automatically remapped on import ready for posting to Xero. You can check and correct any individual maps in the interface if required.

Post

In a single click, your accurately mapped data is posted to Xero.

Built on Microsoft

The entire solution will be hosted on the Microsoft Azure cloud service using an Azure Virtual Machine (VM), built using Microsoft languages, services and technologies.

Quality Data

Automated data checks will flag instances of bad data or errors with error messaging to help you understand the issue.

Ongoing Support

Included in your subscription is ongoing support via email, whenever you need us.
