Manage and protect your devices, your apps, and your users

Endpoint Management Implementation

Delivery highlights

Improve your Microsoft Secure Score with Microsoft Endpoint Manager

Learn how to build management policies that protect your users, company data, and devices

Gain insights about your users' endpoints and their compliance with your IT policies

Determine the best way to give your users access to the apps they need on the devices of their choosing

"Modern device management encompasses a wide range of areas including user protection, adding/removing devices, managed applications, end user support, and rolling out new capabilities."

***Forrester Microsoft 365 Enterprise Total Economic Impact Study**

How are you managing your mobile devices, laptops, and other user endpoints? Do you know if your user's devices are compliant with your IT policies?

Enable users to be productive, on any device, without compromising IT security

Today's users are looking for more ways to remain productive while working on any device. 95% of organizations allow personal devices in the workspace. All these devices add additional risks, when you consider that 70 million smartphones are lost every year.

With users asking for more ways to work the way that they want, this workshop will show you how to manage both company-owned and user-chosen devices in the cloud.

Results you can count on

Experience the power of modern device management within your own environment.
This delivery will result in the solution deployed to production:
- Deploy endpoint management with MEM, Autopilot, Endpoint Analytics, Entra ID
- Zero Trust Model, intelligent security, and risk-based controls
- Advanced analytics, and deep integration to the Microsoft products you already use.

Simplify endpoint management

Cut costs and complexity by managing any device with a tool already built into Microsoft 365. Eliminate redundant solutions and automate labor-intensive tasks and free up IT and Security admins to transition to higher-value activities.

Help protect a hybrid workforce

Adopt **Zero Trust** security architecture that centralizes endpoint security and identity-based device compliance. **Secure** your users' identities with multi-factor authentication and conditional access from any device.
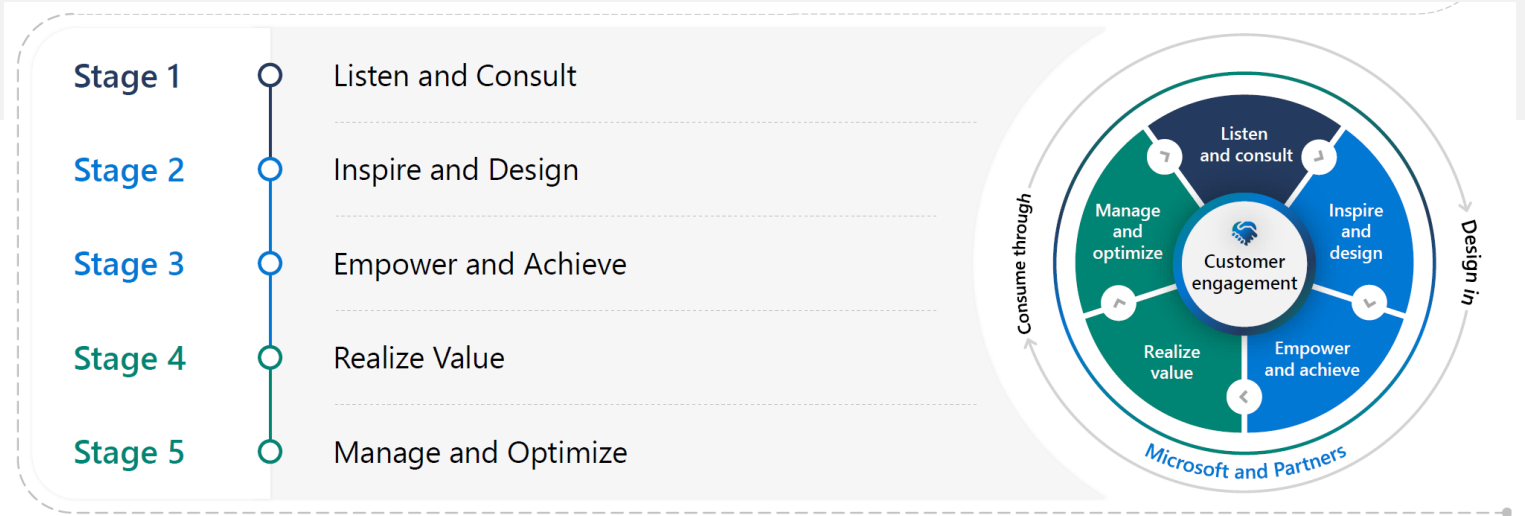

Provide better user experiences
Empower IT to deliver the best possible endpoint experience through zero-touch deployment, flexible, non-intrusive mobile application management, and proactive recommendations based on Microsoft Cloud data.

What to expect

Our goal is to enable the best ways to manage endpoints for your enterprise. Deploy to production Windows Autopilot, device management, and increase the security of corporate and remote devices in your organization. We'll provide you with the ability to protect your authorized users' identities so you can authenticate credentials and manage access while still giving users the freedom to collaborate with others.

Process Stages:

Stage 1	○	Listen and Consult
Stage 2	○	Inspire and Design
Stage 3	○	Empower and Achieve
Stage 4	○	Realize Value
Stage 5	○	Manage and Optimize
