

# MOOVIT'S MOBILITY AS A SERVICE

One mobility platform for all your city's  
transportation needs

**Moovit's Mobility as a Service (MaaS) Platform provides door-to-door solutions that encompass every aspect of a commuter's daily travel, from payment systems to multimodal route planning.**

Cities are struggling to decrease traffic congestion and manage the new influx of urban mobility choices. As citizens' transportation needs are rapidly changing, cities are lacking the tools and data needed to provide efficient mobility to the citizens. Serving as the interface between riders, transit providers and cities, Moovit's MaaS Platform enables passengers to combine all public, shared and on-demand mobility options with a book-and-pay functionality.

More reliable and easily understood information helps make public transit the preferred option for your city's citizens. More people riding transit means less auto congestion, pollution, and transforms parking lots into green spaces for your city.

## Enabling cities and transportation agencies to better manage their citizen's mobility needs.

### Tailored app for your city's urban mobility needs

Select what mobility providers to showcase, custom branding, integration with payments & ticketing systems, enhanced communication tools with users, and more.

### Provide aggregated transit options and information to your residents

Provide first and last-mile solutions, multimodal trip suggestions, real-time transit arrivals, service alerts, city updates and more.

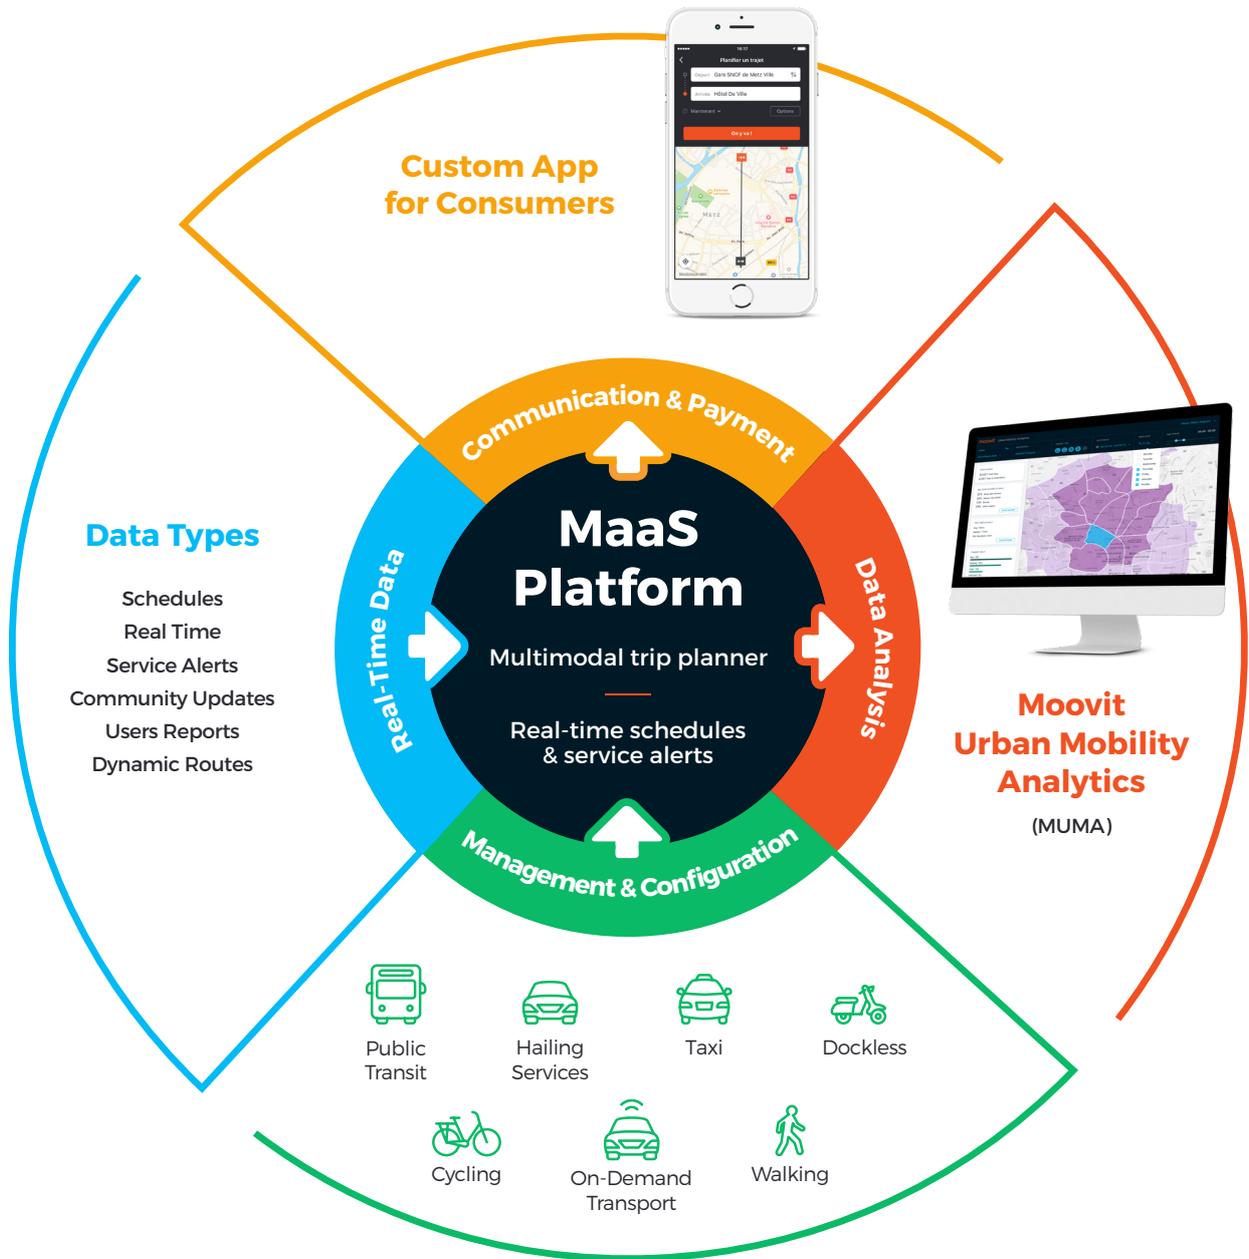

### Intelligent data and analytics solutions

Fusing our Big Data Analytics (we collect billions of data points per day), we give transit planners the tools needed for effective decision-making and optimization.

### Trusted solution from the world's #1 urban mobility company

Moovit has seamlessly guided users on billions of suggested routes across the world. Our award-winning platform has all the functionality your riders need to know in 44 languages and support accessibility features.
