

FIVE GUYS®

Featuring Five Guys France:
A restaurant that believes that simple is the
best approach, finds the same with Yooz AP
automation

About Five Guys

Five Guys was created in Arlington, Virginia, in 1986 when Jerry and Janie Murrell gave their young sons sound advice: "Get into business or go to college. Business won the day and the Murrell family opened its first burgers restaurant called "Five Guys," referring to the five Murrell brothers.

The formula could not be simpler: Hamburgers and fries, all cooked to perfection. Simple, but so effective!

Five Guys began franchising in 2002 and since 2003 had expanded to almost 1,500 locations spanning the United States, Canada, United Kingdom, Europe, and the Middle East.

Five Guys promises hand-formed burgers cooked to perfection, using only fresh ground beef, never frozen.

Five Guys' France AP Challenges and the Yooz Solution Fit

In 2016, when Five Guys launched in France with 10 restaurants, the restaurant group's accounting department was processing an average of 500 invoices per month. At the time, the company was using an external CPA firm, BDO, that was using the Yooz AP automation solution seamlessly integrated with the CEGID ERP.

A year later in 2017, the company made the choice to internalize its accounting functions and chose the Sage Intacct 1000 ERP. And the company implemented the Yooz solution because it recognized the benefits realized by BDO:

- Safety
- Security
- Improvements in productivity efficiency

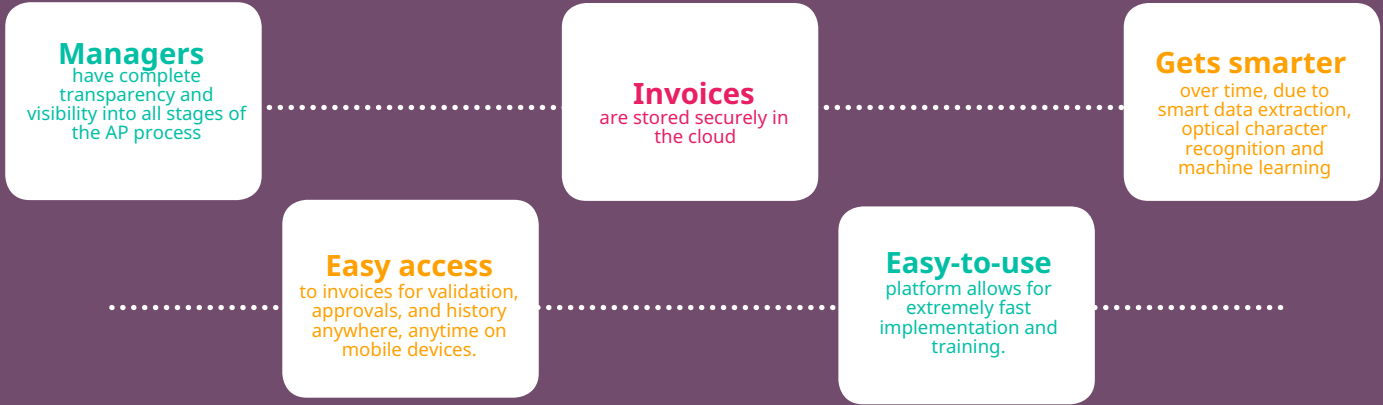

And Yooz also seamlessly integrated with the Sage Intacct ERP.

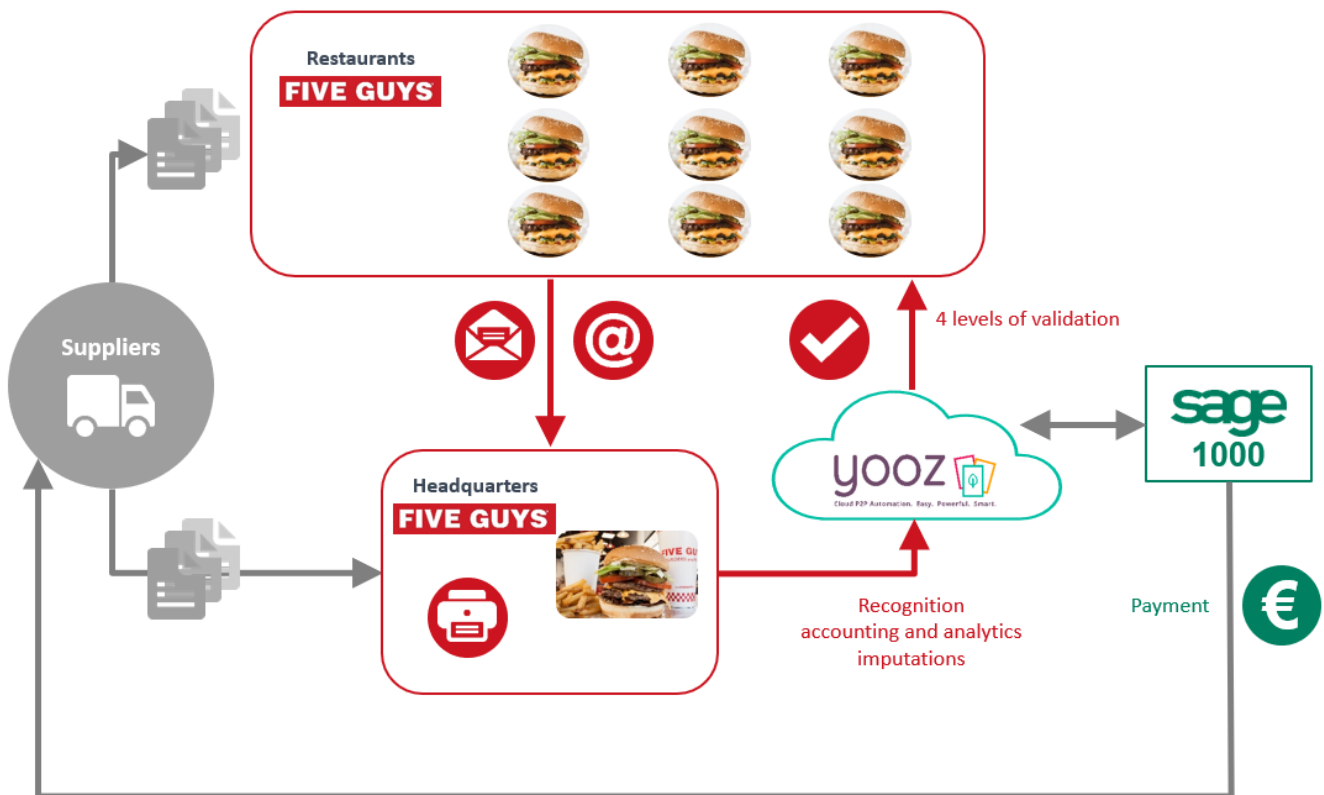

"Our CPA was 100 % operational in just one day! Our franchisees have so many things to do in their restaurants that they don't have time to manage their invoices. Yooz makes their lives easier!"
- Frederic Garo, Five Guys France Finance Manager

It's All About the Results

The Yooz solution seamlessly integrated with the Sage Intacct 1000 ERP allowed Five Guys France to bring their entire invoice and payment processing workflow in-house.
