

# Escrow-as-a-Service

## In partnership with Microsoft Azure

“Our increasingly connected world is accelerating towards a future based in the cloud. Through our industry leading Escrow-as-a-Service solutions, NCC Group can help mitigate risk for all parties involved in the cloud journey and ensure the long term availability of the critical applications”.

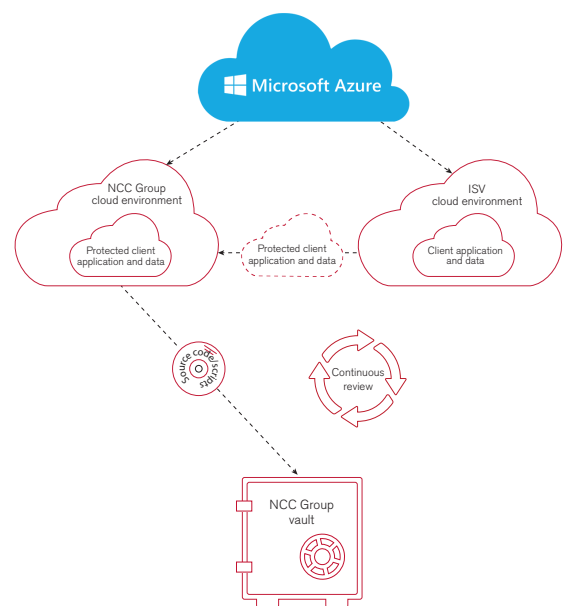

### NCC Group's model for business continuity in Microsoft Azure

NCC Group's Escrow-as-a-Service solutions provide peace of mind that the risk of supply chain failure can be appropriately mitigated.

Our solution provides both protection and storage of material to enable business continuity within cloud environments, in addition to testing its adequacy in a release scenario.

Underwritten by the tri-partite legal agreement, we offer a suite of tailored verification services which provide our end user customers with the assurance they require that their critical application can be created, deployed and maintained in their own specific cloud environment within Microsoft Azure.

Our ISV partners can take a proactive approach to delivering risk mitigation for their clients, easing their path towards fully adopting the cloud with the peace of mind that their application is protected, as part of a fully managed solution available to them either directly with NCC Group, or through the Azure Marketplace.

“The team at NCC Group provided a simple, yet effective solution that fitted our needs, the application and our cloud continuity plan, allowing us access to all of the resources stored within the Microsoft Azure subscription”.

**NCC Group customer, Global cloud-based accounting software vendor**

### About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with businesses to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are best placed to help businesses identify, assess, mitigate & respond to the risks they face.

We are passionate about making the Internet safer and revolutionising the way in which organisations think about cyber security.
