

Enabling all your affiliates and partners to manage and process payments

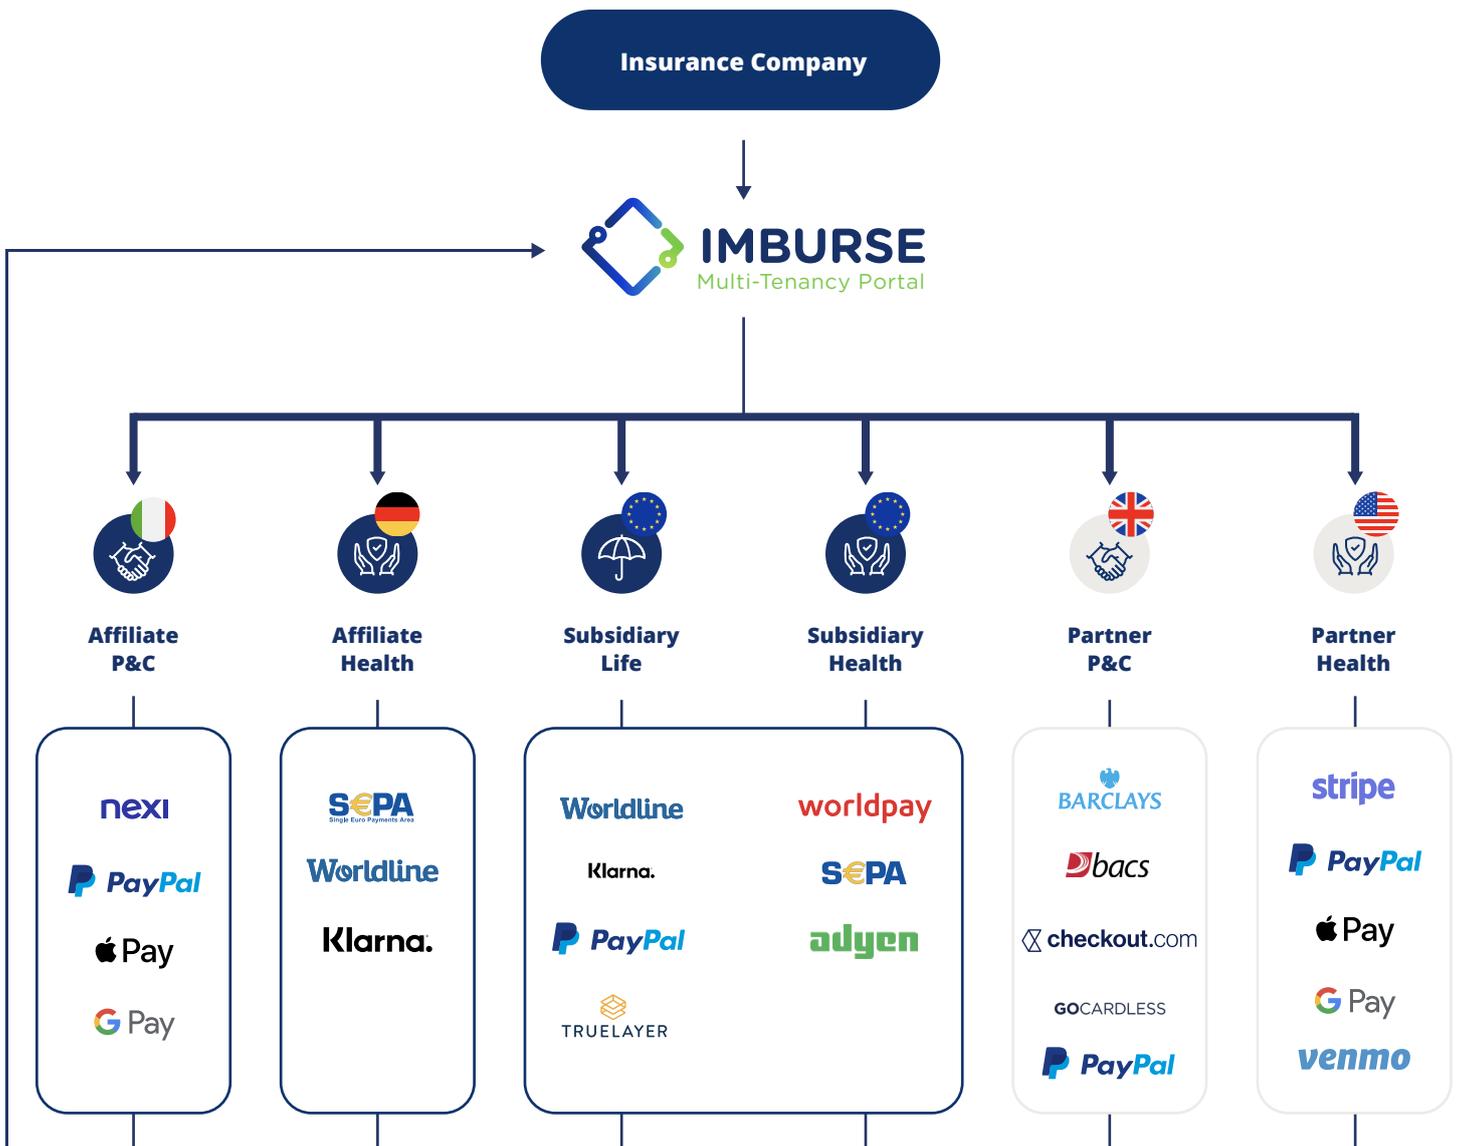

Many of the world's largest insurers act through affiliate and partner structures to meet customer demand in local markets. However, a lack of operational efficiency and IT resources holds them back from fully empowering their affiliates and partners to deliver on local and product-specific payments use-cases. More often than not, payments infrastructure and functionality is still isolated by business line or insurance region, hampering scalability, operational efficiency and customer experience.

How do we solve it?

Developed for large corporates and platform operators, Imburse allows for the management and support of complex multi-business lines/business environments.

Single connection and unified reporting

Through Imburse's multi-tenancy architecture, we can provide uniform, yet individualized payment experiences for each of your affiliates and partners. You don't have to worry about system integrations, reporting structures, or onboarding efforts.

Tenancy Management

Easily onboard and configure the payment setup of your merchants.

Support

Our team can fully support your payments queries and requirements.

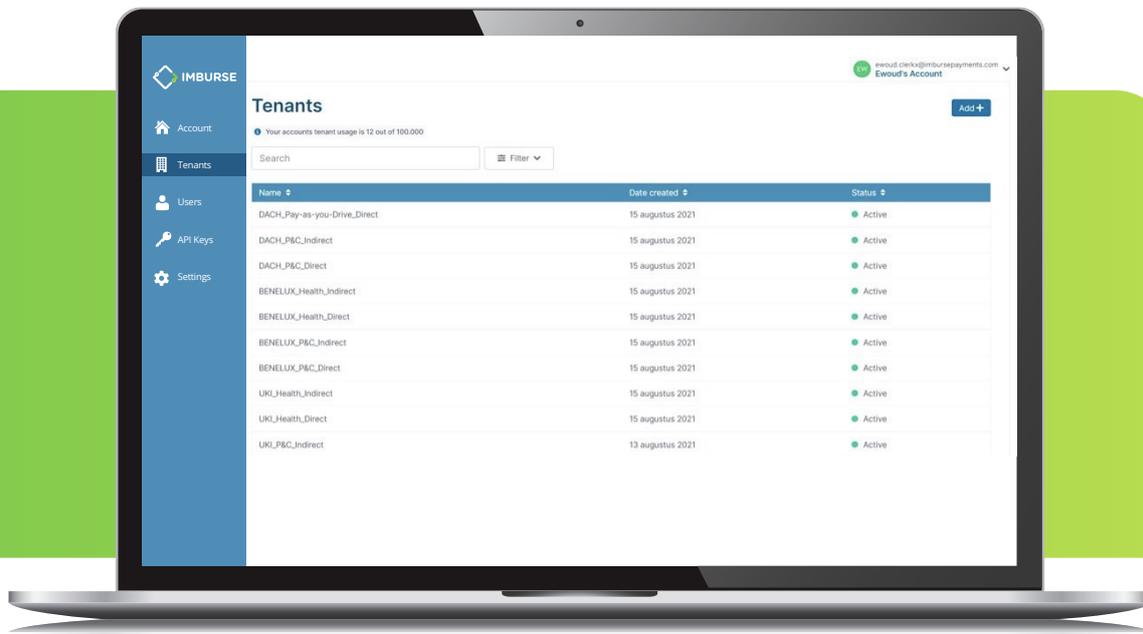

White Label

Enable a customised corporate identity for all your affiliated partners across your payment applications and interfaces.

Core system integrations

Interact with Imburse's payment applications through your own systems and increase your productivity.

Benefits

Optimise your vendor portfolio

Easily scale and expand

Manage data sovereignty

Comprehensive reporting and enriched data
