

DeviceTone™-IoT Suite API documentation

DeviceTone-IoT Suite, is a Ready-to-Run, End-to-End, IoT solution, yet it is very open by nature.

DeviceTone™ comes with **pre-built user interfaces**:

- DeviceTone-**Manager** – device management console
- DeviceTone-**Dashboard** – an attractive dashboard to view your Assets
- DeviceTone-**CRM Connect** – a configurable connector to your CRM system instance, so that Assets can automatically trigger alerts that open a Field-Service ticket.

Still, you may wish to **integrate your managed Assets to some other business application** you have, and we fully support that.

You will find a programmer manual in the following link:

<https://docs.cloudofthings.com/index.html>

And also Swagger support for our API's:

<http://api.cloudofthings.com/v3/swagger/>

We will be delighted to guide you through your onboarding process.
