

# Microsoft Fabric Proof-of-Concept

Service offering

Contact [info@cloubis.be](mailto:info@cloubis.be) for more info!

## 01 Value drivers

- > A lot of organizations are discovering the analytical possibilities of the cloud. With Microsoft Fabric, you can leverage a highly integrated, end-to-end, and easy-to-use environment that is designed to simplify your analytical needs.
- > During this **25-day journey**, we develop an end-to-end data flow for 1 specific use-case on Microsoft Fabric. We guide you from data to insight and will demonstrate the strengths and possibilities Microsoft Fabric has to offer.

## 02 From data to insight

- > Please note that the proof-of-concept is tailor-made to the situation of the customer and therefore, the exact scope will be determined during the introductory workshop.
- > An **introductory workshop** will be organised to:
  - Align on the key-objectives of the proof-of-concept
  - Identify and select a specific use case
  - Select relevant Microsoft Fabric components
  - List measurable outcomes
- > During the **development process**, we will utilize Microsoft Fabric to extract and transform the relevant data into a format ideal for reporting and analysis. Important to note, each step will adhere to Microsoft's best practices in both development and configuration.
- > When building your reports, we adopt our unique **DAR (Design, Analyze, Report)** approach for a holistic solution. Expect a professionally designed dashboard and three comprehensive reports, each crafted to provide actionable insights.
- > In a **closing session** we will demonstrate the solution, explain the technical components and architectural decisions, and link detailed documentation. It is possible to extend the engagement and request additional support to transform the proof-of-concept into a production worthy solution.
