A woman with glasses and a striped shirt is leaning over a desk, looking at a document. A white humanoid robot with blue eyes is sitting at the desk next to her, also looking at the document. The background is a bright, modern office setting.

**Intelligent apps build on
the Microsoft platforms -
Workshop to start building
AI-infused apps**

Workshop offering

Intelligent apps build on the Microsoft platforms. Get ready to implement apps powered by AI services.

7.500 €

Goals of the Workshop

Designed as 1,5 day workshop format we give an overview on services, best practices and customer examples before we jointly envision one AI-infused application for your company.

Approach

-  Get an overview on Microsoft services to be used in intelligent apps (e.g. OpenAI, Cognitive Services, Power Virtual Agent, ...)
-  Jointly envision a possible MVP for your company based on your requirements.
-  Define on next steps based on a solution blueprint & effort estimation of your MVP application

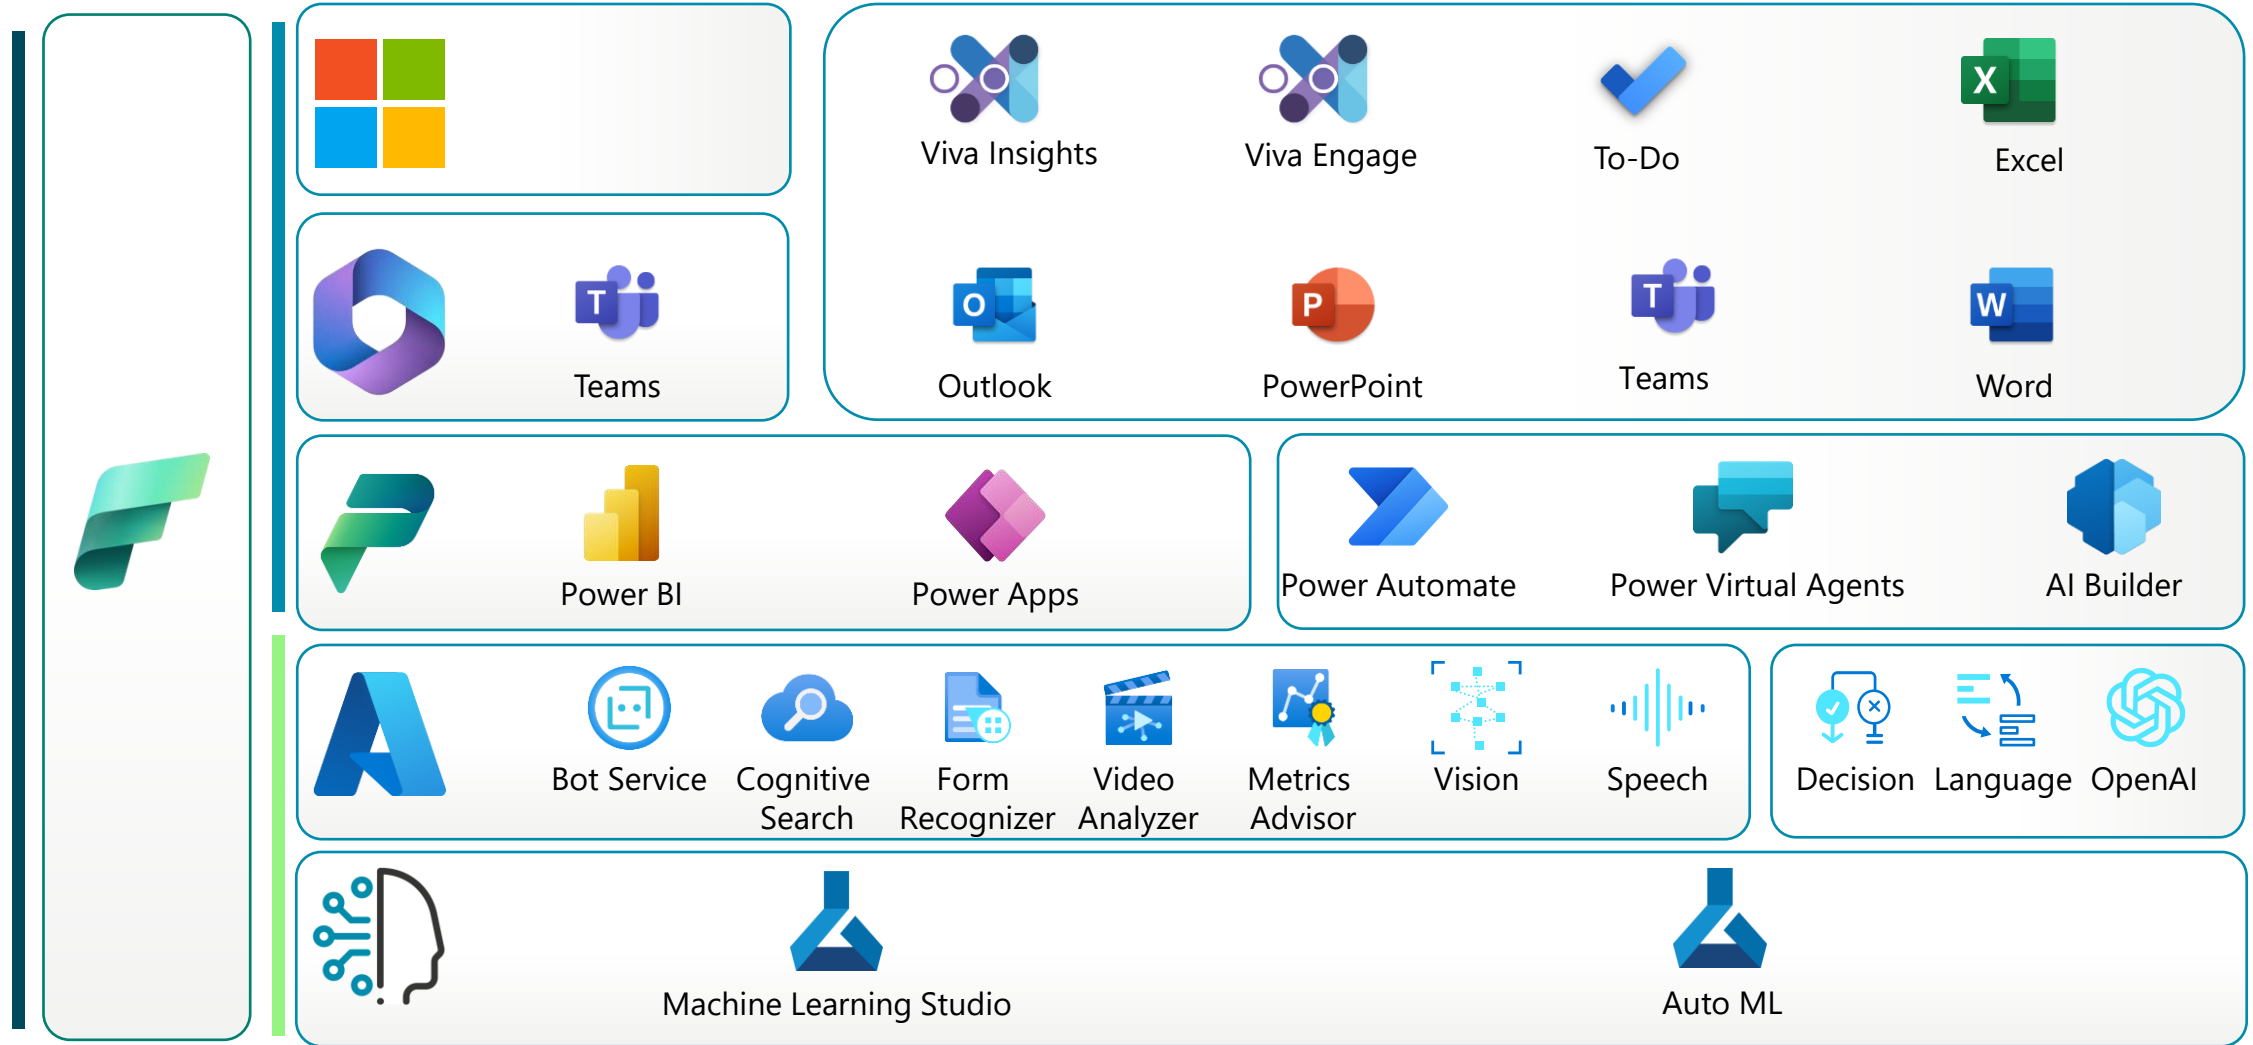

Results

- Understanding of the AI components within the platforms Azure, Power Platform and M365
- Documented use case to be build with AI components at heart
- Mockups of the newly designed application to showcase in your company
- Effort estimation as well as a technical architecture blueprint to decide on next steps

Setup

-  **Duration**
1,5 day work-shop
-  **Participants**
max. 10, IT and Business
-  **Format**
Virtual / Onsite

Microsoft AI landscape. Services to make apps more intelligent on the Microsoft platforms.

Exemplary challenges solved by AI. AI helps to solve challenges of high complexity.

Content creation automation:

such as automatic content creation for status reports, business plans, diagnostics, product descriptions and more.

Easier access to complex information:

Through transforming complex information into easy-to-understand formats. E.g. creating summaries of scientific articles

Assistance with complex tasks:

by providing suggestions or recommendations based on very large, complex sources of knowledge, e.g. in medicine.

Enhancing creativity and innovation:

by generating new ideas, designs, and solutions by combining existing concepts in novel ways. This can be particularly useful in industries such as marketing, and research & development, where innovation is crucial for staying competitive.

Improving decision-making:

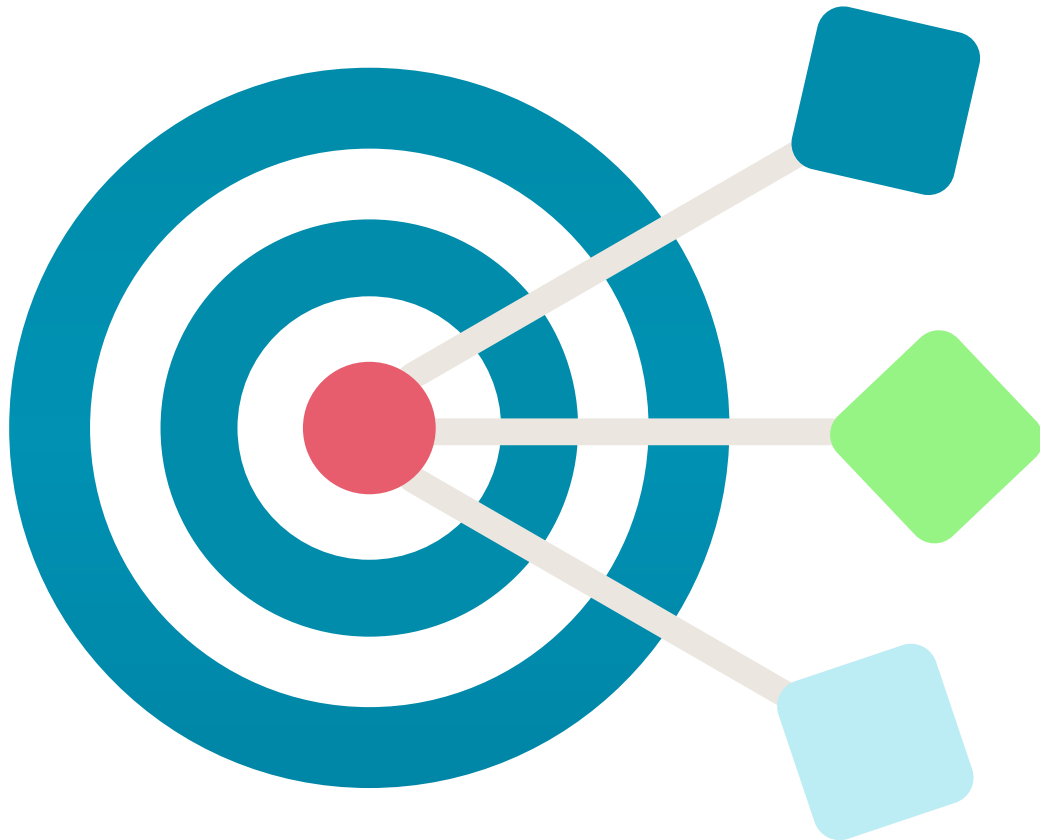

by providing predictions and recommendations based on data analysis in areas such as business strategy, risk management or resource planning.

Improving customer interaction:

through personalized and contextualized in customer service applications or used in interactive chatbots.

Additional service within intelligent applications we offer...

MS Teams-integrated ChatGPT Bot on your data

Together with you we develop a Teams integrated bot on your data as an MVP within a fixed effort approach

~15.000 €

Implementation of a intelligent App - MVP

We build an MVP for your intelligent application within 6 weeks time frame according to your requirements

~40.000 €

Additional service offerings

CS offers various services in the area of cloud application development, e.g. migration strategy, platform enablement (Azure & Power Platform, training, ...)
