LEVERX .NET/Microsoft Azure EXPERTISE

A Few Facts About LeverX

800+
clients

1,600+
employees

950+
successful
projects

20
years in business

 **10**
countries

 **14**
offices

 **15**
time zones
UTC-8 to UTC+6

Helping companies leverage
investments in SAP solutions

A sub-brand of LeverX which provides full
software engineering services for
startups and established companies in
consumer and enterprise areas

SOLUTION CATEGORIES

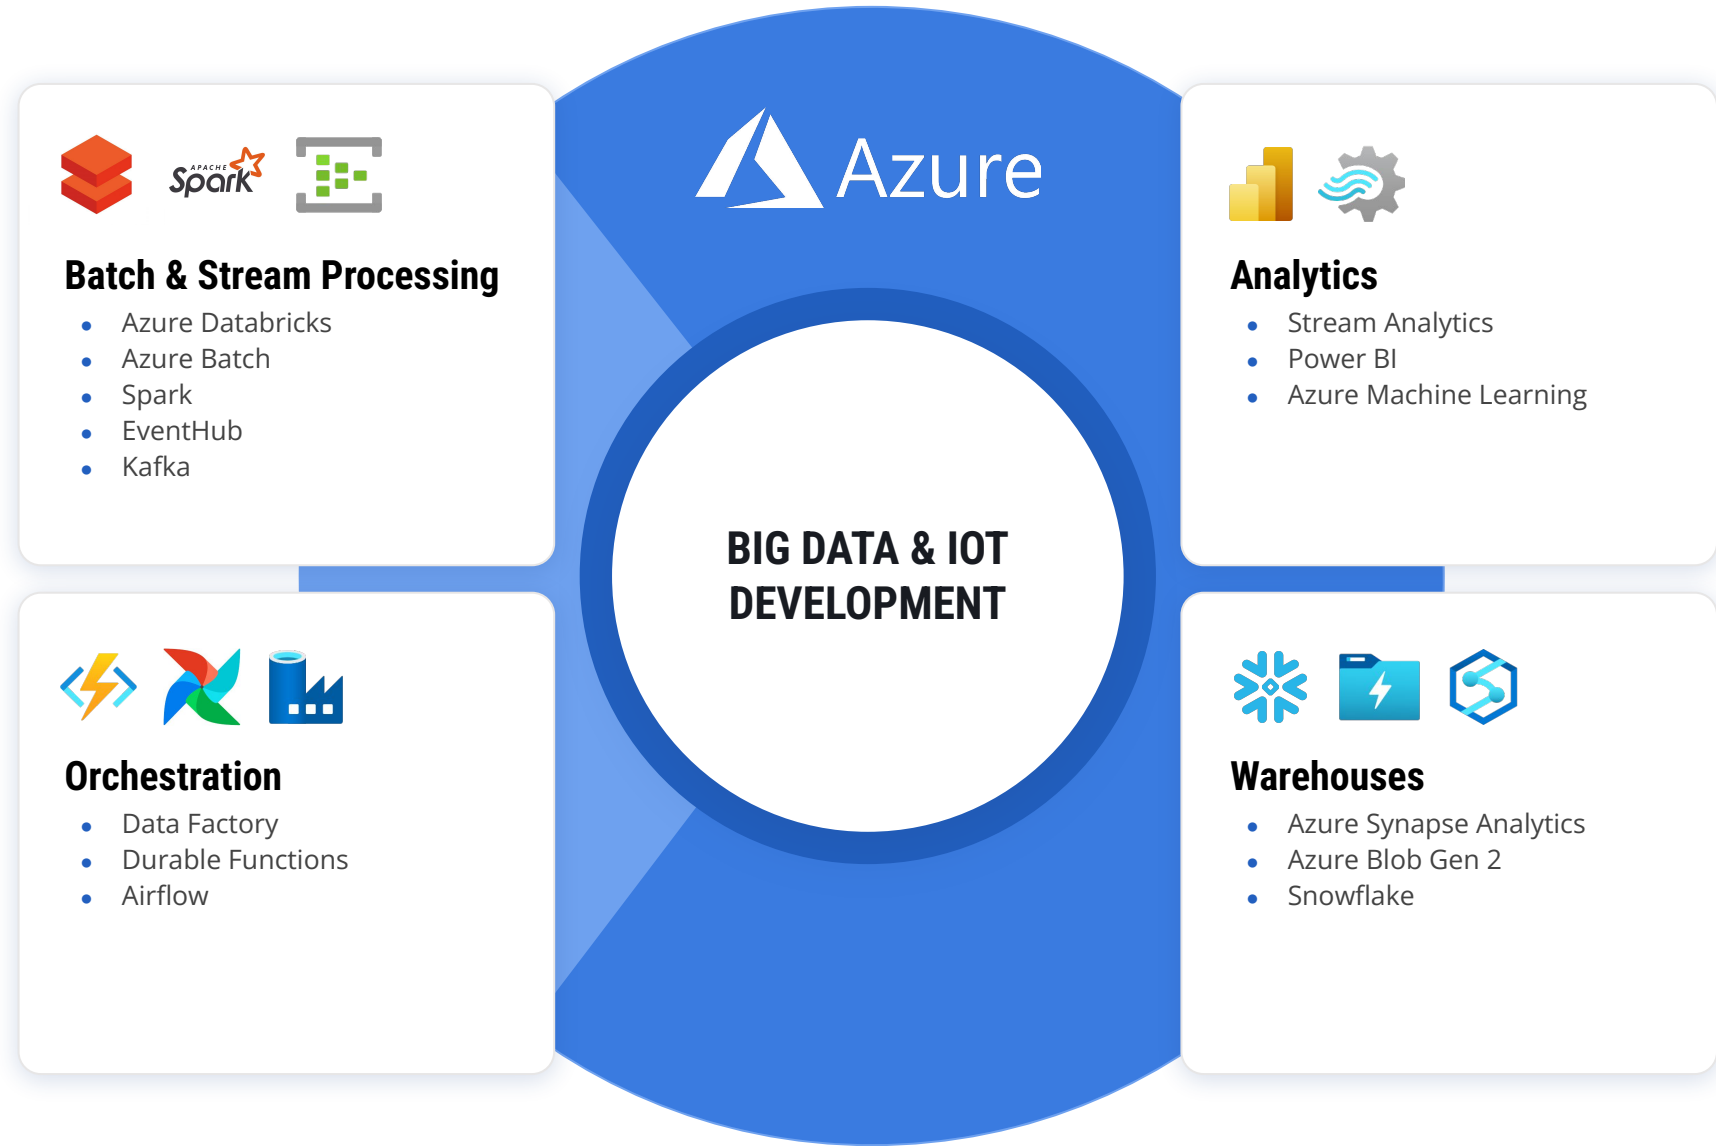

Web & Mobile application development

We are specialized in developing **dynamic** and **interactive** web applications that are **scalable**, **secure**, and highly available. We have extensive experience in **creating complex** backend systems from scratch, as well as **migrating existing applications** to the **cloud** and transforming big monolithic systems into microservice-based systems using modern techniques such as **DDD**, **CQRS**, and **Event-Driven** architecture.

Big Data & IoT Development

Our team is comprised of **certified Azure Data Engineers**, who specialize in developing **Big Data** and **IoT solutions** using **.NET, Python** and **Azure**. We have extensive experience in **designing** and **implementing large-scale data processing** and **analytics systems** that can handle massive volumes of data. We can help you leverage the power of **Azure Data Factory, Azure Databricks**, and other Azure services to build a Big Data solution according to your needs.

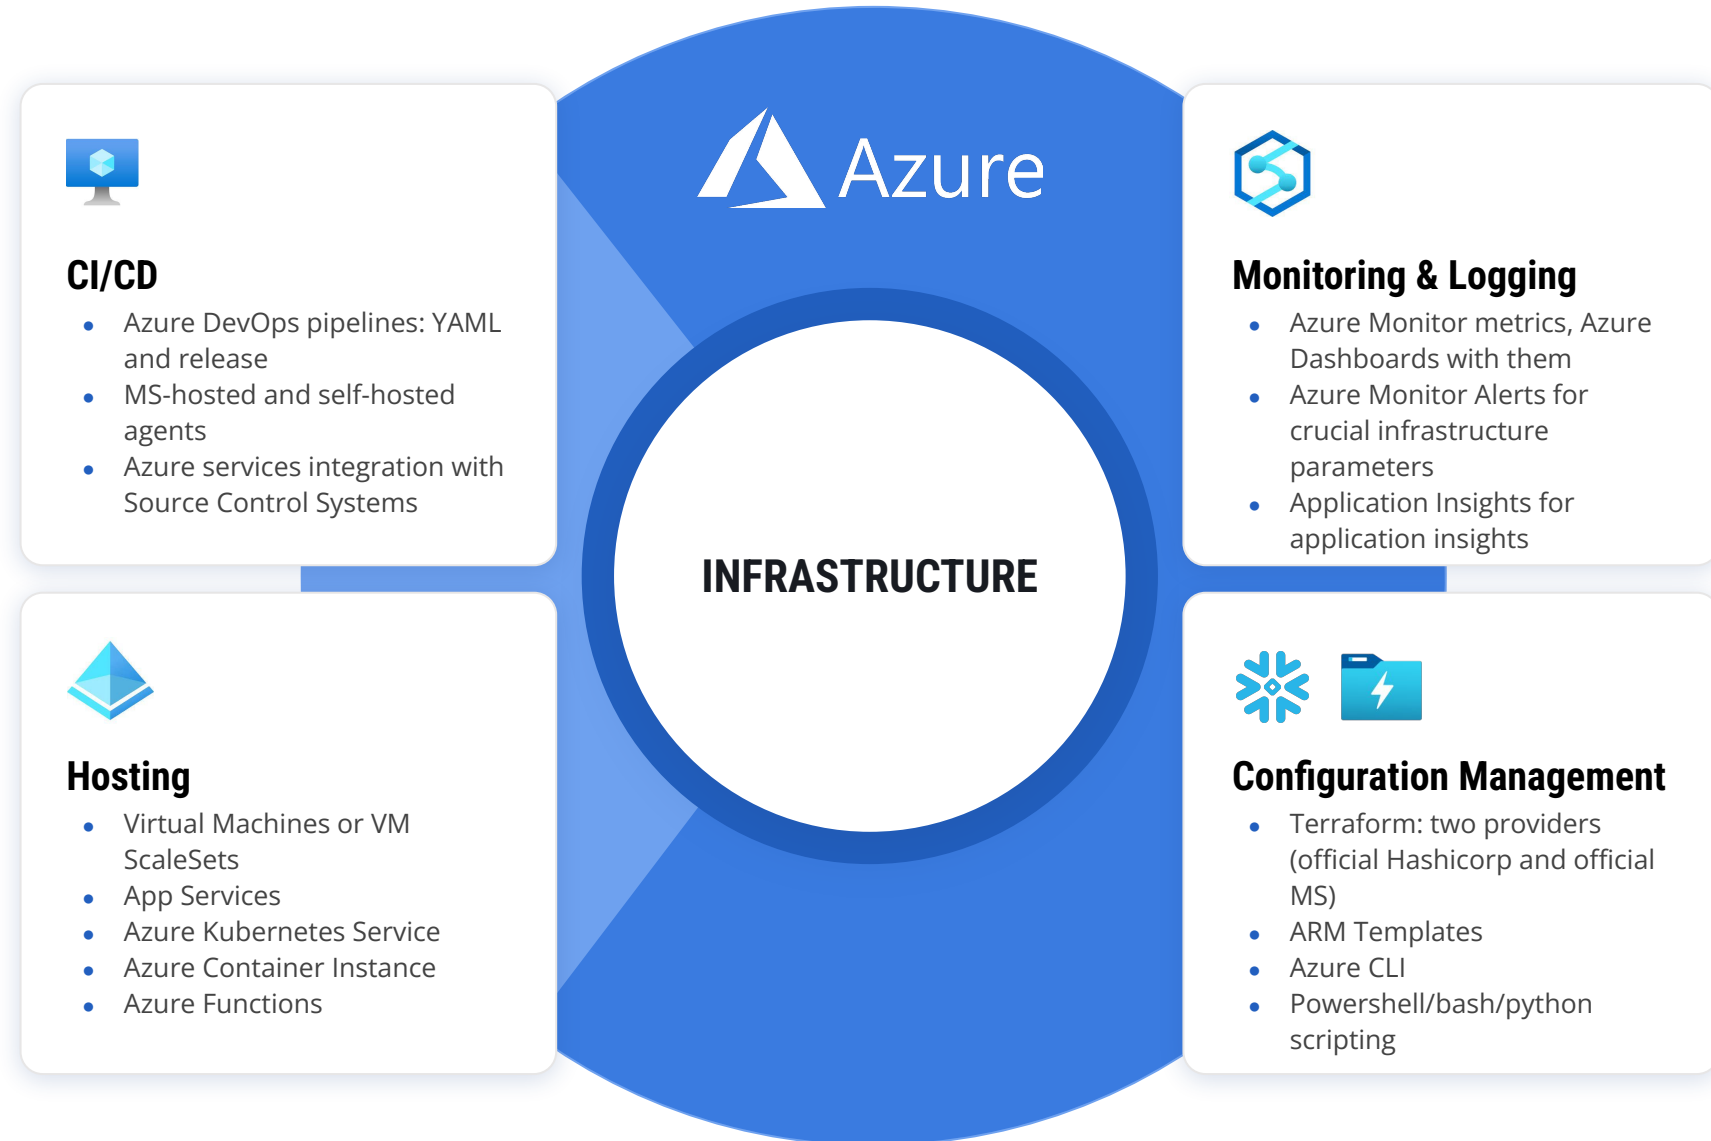

Infrastructure

DevOps engineers have deep experience in all classes of services of the Azure public cloud provider:

- Networking
- Compute
- Storage and databases
- Monitoring
- Security
- Management and cost optimization

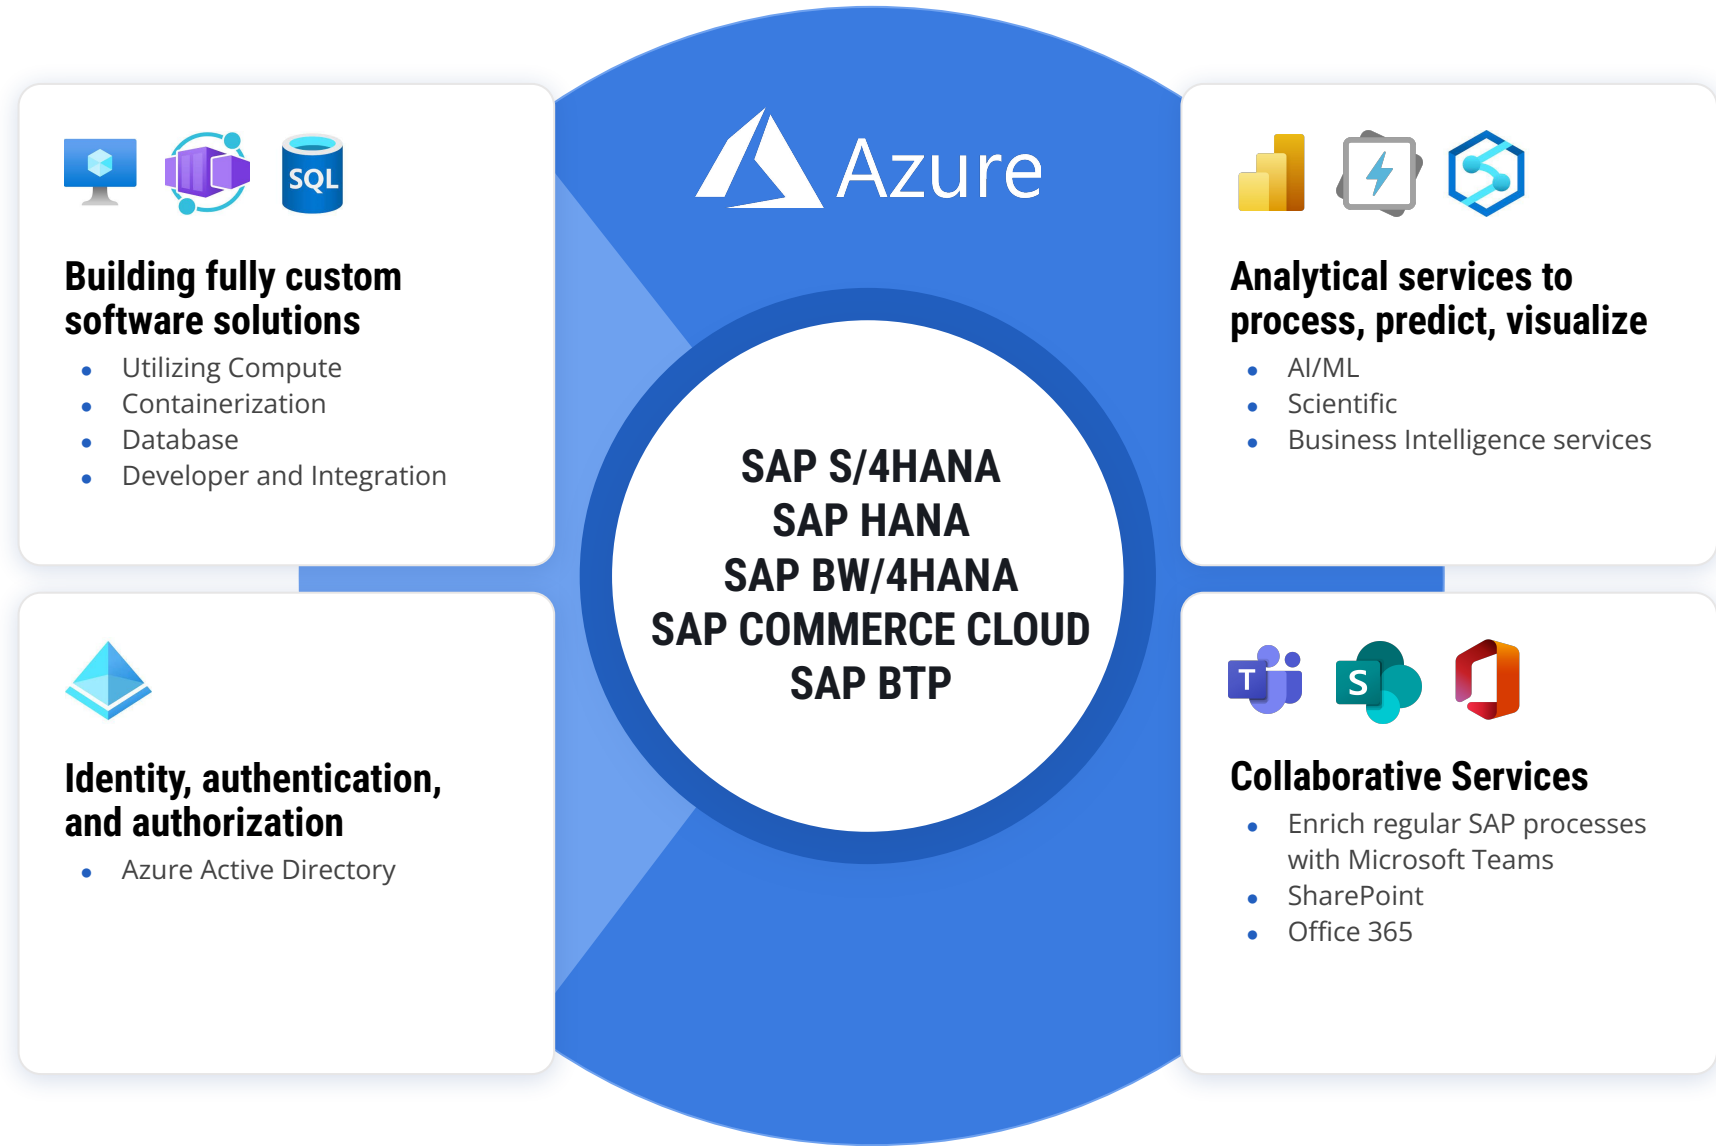

We have small startup projects where every cost makes sense as well as big enterprise projects where security and management are essential - we adopt to project scale and customer demands.

Our specialists have official certificates regarding Azure architecture, networking, databases, Kubernetes, Terraform and others.

SAP on Azure

We are not focused on just bringing SAP to Azure. Our focus as a System Integrator is building for our Clients and Partners **truly comprehensive, effective and robust Microsoft infrastructure around and together with the SAP landscape.**

Building fully custom software solutions

- Utilizing Compute
- Containerization
- Database
- Developer and Integration

Analytical services to process, predict, visualize

- AI/ML
- Scientific
- Business Intelligence services

Identity, authentication, and authorization

- Azure Active Directory

Collaborative Services

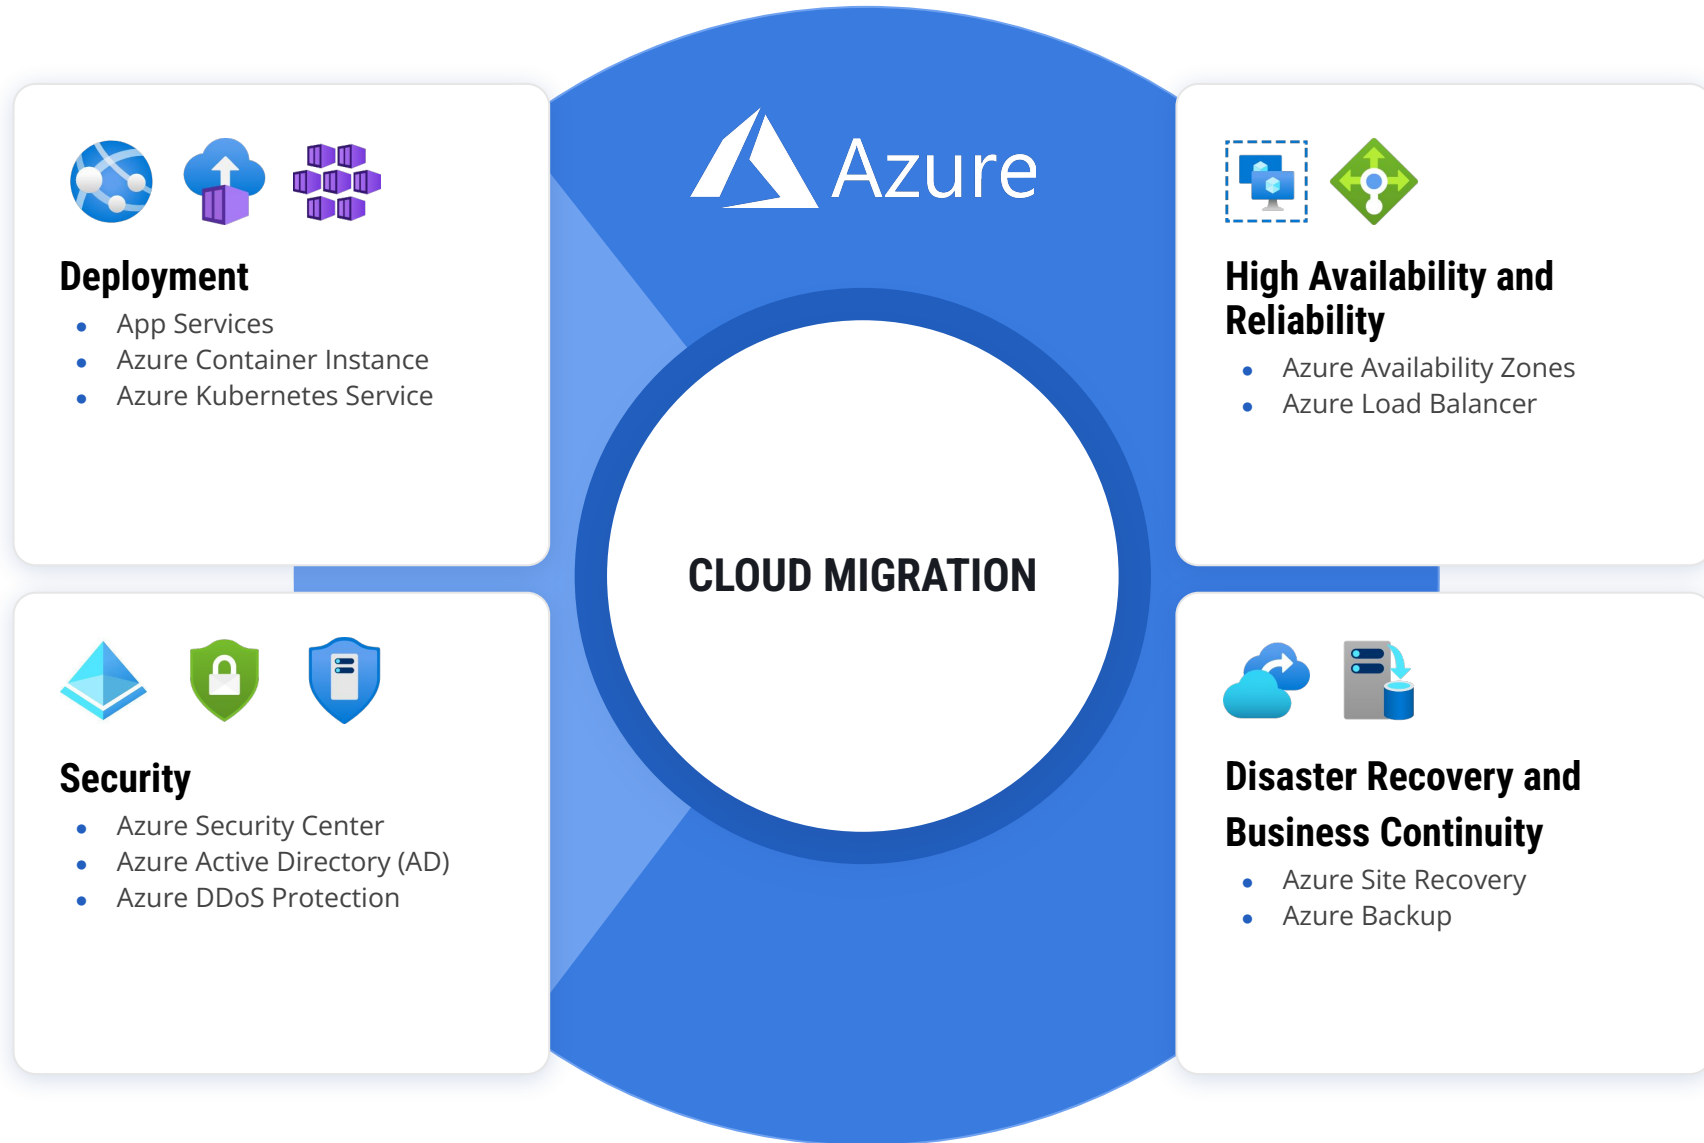

- Enrich regular SAP processes with Microsoft Teams
- SharePoint
- Office 365

Cloud Migration

Our .NET team brings extensive expertise in migrating from on-premises servers to the cloud, leveraging the power of the cloud to enhance the business operations.

We have experience in handling various aspects of cloud migration, including infrastructure setup, DevOps practices, security implementation, and cost optimization.

We have successfully migrated applications from on-premises server into Azure App Service, Container Instance, and Kubernetes Service.

Desktop Development

Our company specializes in **.NET cross-platform development**. We offer **custom** and **complex** application development with **cross-platform compatibility, integration** services, **high data volume** support, and thorough testing for reliable and **high-performing** desktop applications.

In addition, we take pride in our own product - [DataLark](#). DataLark is **one of the leading** data management platforms that helps enterprises migrate and integrate business-critical data on-premises and in the cloud more quickly, securely and cost effectively.
