

Next-generation cloud banking enabled by the latest proven technology

- Experience a cloud-native, flexible and compliant core banking platform that offers speed and agility
- Scale with a platform designed for growth - using building blocks and a pay-per-usage model
- Enjoy a core banking platform with a high degree of automation and configuration for lower TCO

Next Generation of Banking

Digital transformation is a must for banks. Changing customer demands, together with pressure to reduce costs and increase efficiency, are leaving banks with no option but to use modern technology. Fintech companies and challenger banks should focus fully on creating the best banking experience. Therefore, they need to rely on a backend solution that supports flexibility, scalability and reliability.

Vilja offers a cloud-native core banking platform that in a modular approach covers the entire lifecycle of lending and savings operations. Our solution is designed for self-service and automation for a great customer experience, minimizing manual errors and optimizing TCO. Backed with speed and a high degree of configurability.
