

Azure Arc Implementation

Microsoft Azure Arc is a cutting-edge solution that provides a unified method for management of resources.

We diligently implement Extended Security Update to all onboarded and eligible servers.

The Problem

Many organizations face daunting challenge in building applications with flexibility to smoothly run across datacenters, multi-cloud environments, and the edge.

Do you wish to have Azure Arc Extension deployment in your environment?

- Challenge 1: Operational inefficiencies
- Challenge 2: Lack of KQL query knowledge
- Challenge 3: Complexity in creating dashboard
- Challenge 4: Challenges in integrating with existing systems
- Challenge 5: Inefficiency in SQL management

Why Choose Noventiq for Azure Arc implementation?

 **Using innovative technology solutions:** Use recent technology trends and breakthrough solutions.

 **Maximize investments:** We help you get most out of your current Azure resources.

 **Security & Compliance:** We strongly focus on security practices and compliance standards.

 **Improve resource alignment:** We ensure your cloud usage and costs match business needs.

 **Timely Assistance:** Offering timely assistance through each phase of implementation.

The Solution

Ensure seamless integration with the existing system effectively by Noventiq's offer! This innovative offer seeks to optimize the operational processes by streamlining management tasks across various environments.

Noventiq has prominent cloud engineers who efficiently onboard all EOL/EOS servers to Azure Arc and implement ESU (Extended Security Updates) to all onboarded and eligible servers.

With the enablement of ESU, it will be a pay-as-you-go model rather than an upfront one.

Key Features

 **Single pane glass view for all on-prem/non-Azure resources**

 **Extended security updates for EOL/EOS instances**

 **Integration with Microsoft Defender for Cloud for endpoint protection.**

 **Leveraging SQL native Azure features**

 **Creation of dashboard by innovative methods**

 **Unified monitoring and reporting capabilities**

 **Creation of Azure Policies and automated scripts for onboarded servers**
