

# Azure Virtual Desktop Workshop

Azure Virtual Desktop (AVD) is here to revolutionise your workspace, offering a personalised touch to your virtual desktop experience. We understand that every organisation is different. Our experienced consultants are committed to guiding you through an evaluation prior to an AVD deployment, ensuring you a seamless and efficient transition.

## Workshop Structure:

- 1 Discovery Phase**

The workshop starts with a discovery phase to understand your business better. Our experts collaborate closely with your team to understand your business processes, workflow dynamics, and IT infrastructure.
- 2 Technical Evaluation**

Our experts will conduct an interactive session to evaluate and determine the suitability of AVD for your organisation.
- 3 AVD Deployment Plan**

The workshop doesn't just address current needs but anticipates future growth through knowledge transfer, project scoping and planning. We will make recommendations and a roadmap to establish your organisation's personas and map out your user journey.

## Benefits of AVD

### Anywhere, Anytime Access

AVD enables your team to access their desktops and applications securely from any device, empowering them to work from anywhere with an internet connection.

### Scalability

Scale your infrastructure up or down based on your business needs. AVD allows you to add or remove users effortlessly, ensuring that your IT resources align with your organisation's growth.

### Enhanced Security

With AVD, your data is safeguarded in Microsoft Azure, benefiting from the advanced security features of the cloud platform. Enjoy peace of mind knowing your sensitive information is protected against evolving cyber threats.

### Cost Efficiency

Shift from traditional hardware investments to a more cost-effective, pay-as-you-go model. AVD minimise upfront expenses and reduces the burden of ongoing maintenance.

### Collaboration Made Easy

Foster collaboration among your teams, regardless of their locations. AVD provides a shared virtual environment, allowing seamless collaboration and communication.
