

Discover a better way to do cybersecurity

Protect every endpoint, user, and workload with Microsoft Security and ANS Managed Extended Detection & Response

With data, apps, and devices everywhere, it's hard to keep attackers at bay

Percentage of attacks that target system misconfigurations and known vulnerabilities.¹

Increase in the number of cyber-attacks in the past 12 months.¹

How are you protecting your business against modern cyber threats?

Poor configuration is the weakest link

It's one thing for a data leak to blindside you. But you shouldn't make it easy for attackers to exploit your systems. Don't let known security gaps go unchecked.

The cost of a data breach continues to grow

Paying ransom for stolen data can be financially devastating on its own. But imagine having to pay additional legal fees and suffering damage to your reputation too.

Having a line of defence is non-negotiable

Companies have more endpoints, accounts, and potential attack surfaces today than ever. Threat monitoring is critical, but no small task when resources are limited.

Breathe easy with fully managed threat protection powered by Microsoft Security

Put your Microsoft Security product portfolio to work

Microsoft has some of the most robust security tools on the market. With the right expertise at your disposal, configure, maintain, and optimise platforms like Microsoft Sentinel to actively remediate incidents on your behalf.

Contain and remediate security incidents in record time

Integrate tools and workflows across your organisation to improve visibility. Bring together intelligence, and lived experience that makes it far easier to spot and remediate issues without overextending resources.

Prevent, detect, and respond to threats with extra support

You don't need to build your own security practice or establish an in-house Security Operations Centre to keep your company safe. Explore managed services with cost-effective incident detection, investigation, and remediation.

Trust in a comprehensive security team fully equipped to meet your needs

Security Centre of Excellence

ANS security analysts can advise on threat hunting, SOAR playbooks, compliance, and detection rule implementation and processes for you.

UK Security Operations Centre

ANS has 70+ qualified security experts in its UK-based SOC who are skilled at creating playbooks, building automated responses, and implementing manual remediation.³

Member of Microsoft Intelligent Security Association

Microsoft Security certified

ANS is a leading Microsoft Security partner globally, giving you access to the world's best security know-how, technology, and best practices.³
