

Dell Implementation Services for Arc-enabled SQL Server

To make it easier to maintain and scale their analytics capabilities, organizations are using Azure Arc management tools to centrally govern and manage SQL Server instances across diverse environments. This ensures consistent configurations, policies, and security practices across the entire SQL Server estate, regardless of where they are hosted driving overall efficiency. Also, it makes sense to leverage Azure's security features/ policies to enhance security of their SQL Server instances.

However, moving to an Arc-enabled SQL environment can be challenging due to the technical complexity of its features. Organizations today are relying heavily on expert service providers to maximize the potential of Arc-enabled SQL environments.

This service is designed to accelerate customer success while enabling the capabilities of Azure Arc for SQL Server. Acceleration is achieved both by providing deep subject matter expertise from Dell and through pairing opportunities for customer team members to learn the relevant skills, best practices, and tools on-the-job. Together, the joint Dell Services and customer team will assess, plan, refactor, configure, test, deploy an Arc-enabled SQL server environment.

Our team of experts will help you deliver the outcomes your business needs:

- Improve the SQL Server administration and governance experience by enabling the management and services capabilities of Azure Arc for SQL Server.
- Allow for seamless scaling of resources, ensuring that databases can handle increased workloads without compromising performance or availability.
- Run Azure data services across on-premises, multi-cloud and edge.
- Take advantage of advanced security features, including encryption, authentication, and threat detection, ensuring data remains protected regardless of the deployment location.
