

# Migration: Microsoft 365 (On-Premise to Tenant)

Microsoft 365 Tenant Migration provides a full-service approach to inter-tenant migration.

Migrate your mail and file data from source environments to Microsoft 365 (Exchange Online and SharePoint Online)

Migration occurs without user data leaving the Microsoft 365 cloud and with minimal disruption.

Microsoft 365 offers migration tools available in the Microsoft Admin Center to help you prepare and configure your environment for migration.

Take advantage of the complete library of productivity tools, security and a vast ecosystem of applications in Microsoft 365.

Inter-tenant mailbox migration allows tenant administrators to use familiar interfaces such as Exchange Online PowerShell and MRS to transition users to their new organization.

Provide a migration model based on business scenarios and architectural approaches.

The content will move from the source to the destination, leaving behind a redirect link in Source.
