

Solve application compatibility issues & move legacy apps to Win10 with AppsAnywhere

Included within the AppsAnywhere solution is the ability to virtualize 100% of Windows Apps, even those with plug-ins, dependencies and services. This can help remove blockers where a legacy application could be stopping an organizations move to Win10.

AppsAnywhere supports a multitude of IT environments, including Cloudpaging, Microsoft SCCM & App-V, Parallels RAS and VMware. Nurture your existing infrastructure and integrate with Active Directory, to allow single sign-on.

Why customers use AppsAnywhere:

- Move legacy apps to Win10
- Consolidate multiple delivery methods into 1 launch button
- Considerably cheaper than a pure VDI environment

Increase IT Efficiency

- Deploying apps on demand to reduce your image size by 75%
- Cut packaging time by 50%

Save money on licenses and guarantee compliance

- Centrally-manage software licenses and set access criteria on a per-app basis, to ensure all restrictions are met.

Supports BYOD/Home working

- AppsAnywhere enables employees to work on any device in any location, on corporate or personal machines.

Over 1.5 millions users globally

One single point of access for all applications

Make your estate more secure by utilizing the latest OS

“Our staff and academics are calling it a game-changer” University of Derby
