Industry 4.0 Imperatives

FactoryWise-Connected Operations Platform

Production Lines

- Real time production monitoring
- Improvement of process efficiency (OEE)
- Downtime analysis
- Increase profit margins
- Reduce compliance risk

Control Centre

- Generation & consumption monitoring & analysis
- Leak identification
- Usage based cost accounting
- Alert generation for pre-configured event

Maintenance Operations

- Reduce maintenance cost
- Reduce complaints risk
- Improve equipment runtime
- Usage driven maintenance scheduling of equipment
- Condition based predictive maintenance

Production Monitoring

Configurable platform

Real time visibility into operations

Automated calculation of TPM losses

Downtime analysis

Automated SPC reports

Shop and plant dashboards

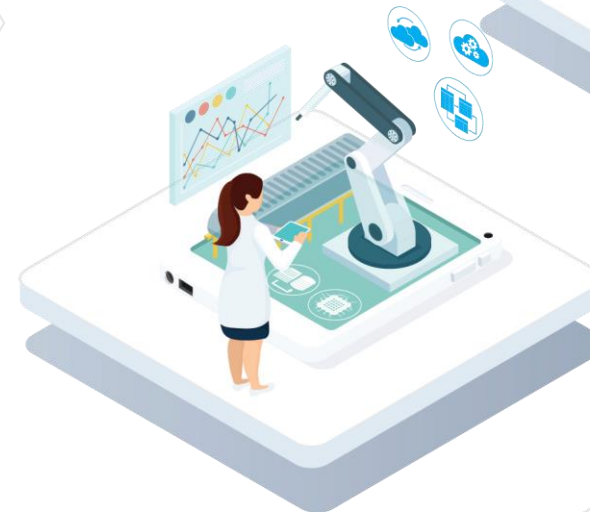

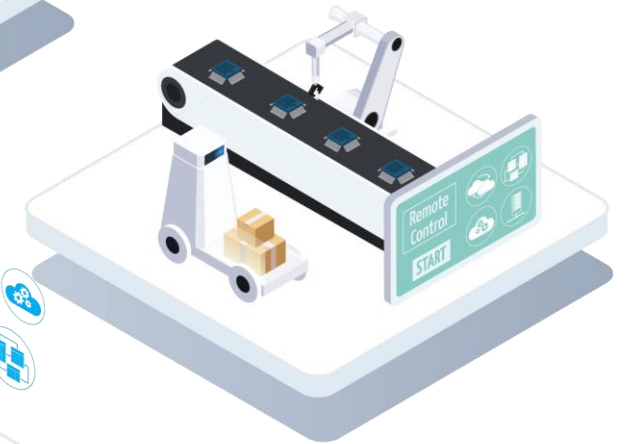

Real time alerts and notifications

AI/Chat bot extensions

Integration with ERP and SCM systems

Utilities Monitoring

Usage based cost accounting

Rules based alerts and notifications

Integration with ERP system

Real time usage reports

Supply side and consumption side analytics

Identification of leakages in distribution

Maintenance Operations

Automated generation of work orders

Condition based monitoring

Preventive & Autonomous maintenance schedules

Predictive maintenance models

Technician mobile app

Technician performance measurement

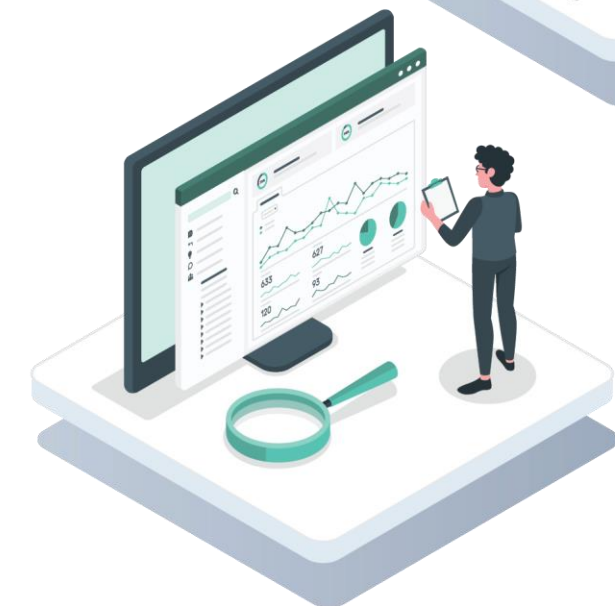

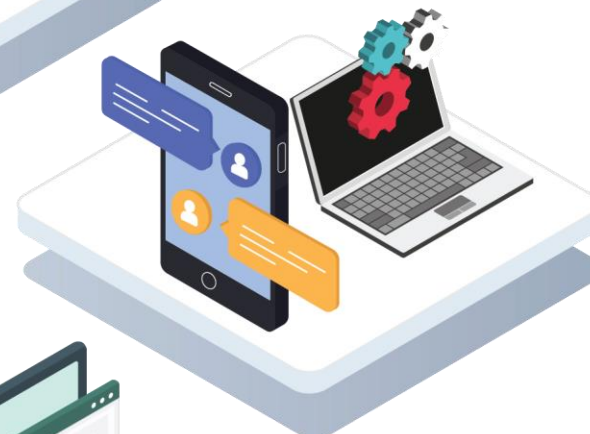

Real time tracking of work orders

Rules based alerts and notifications

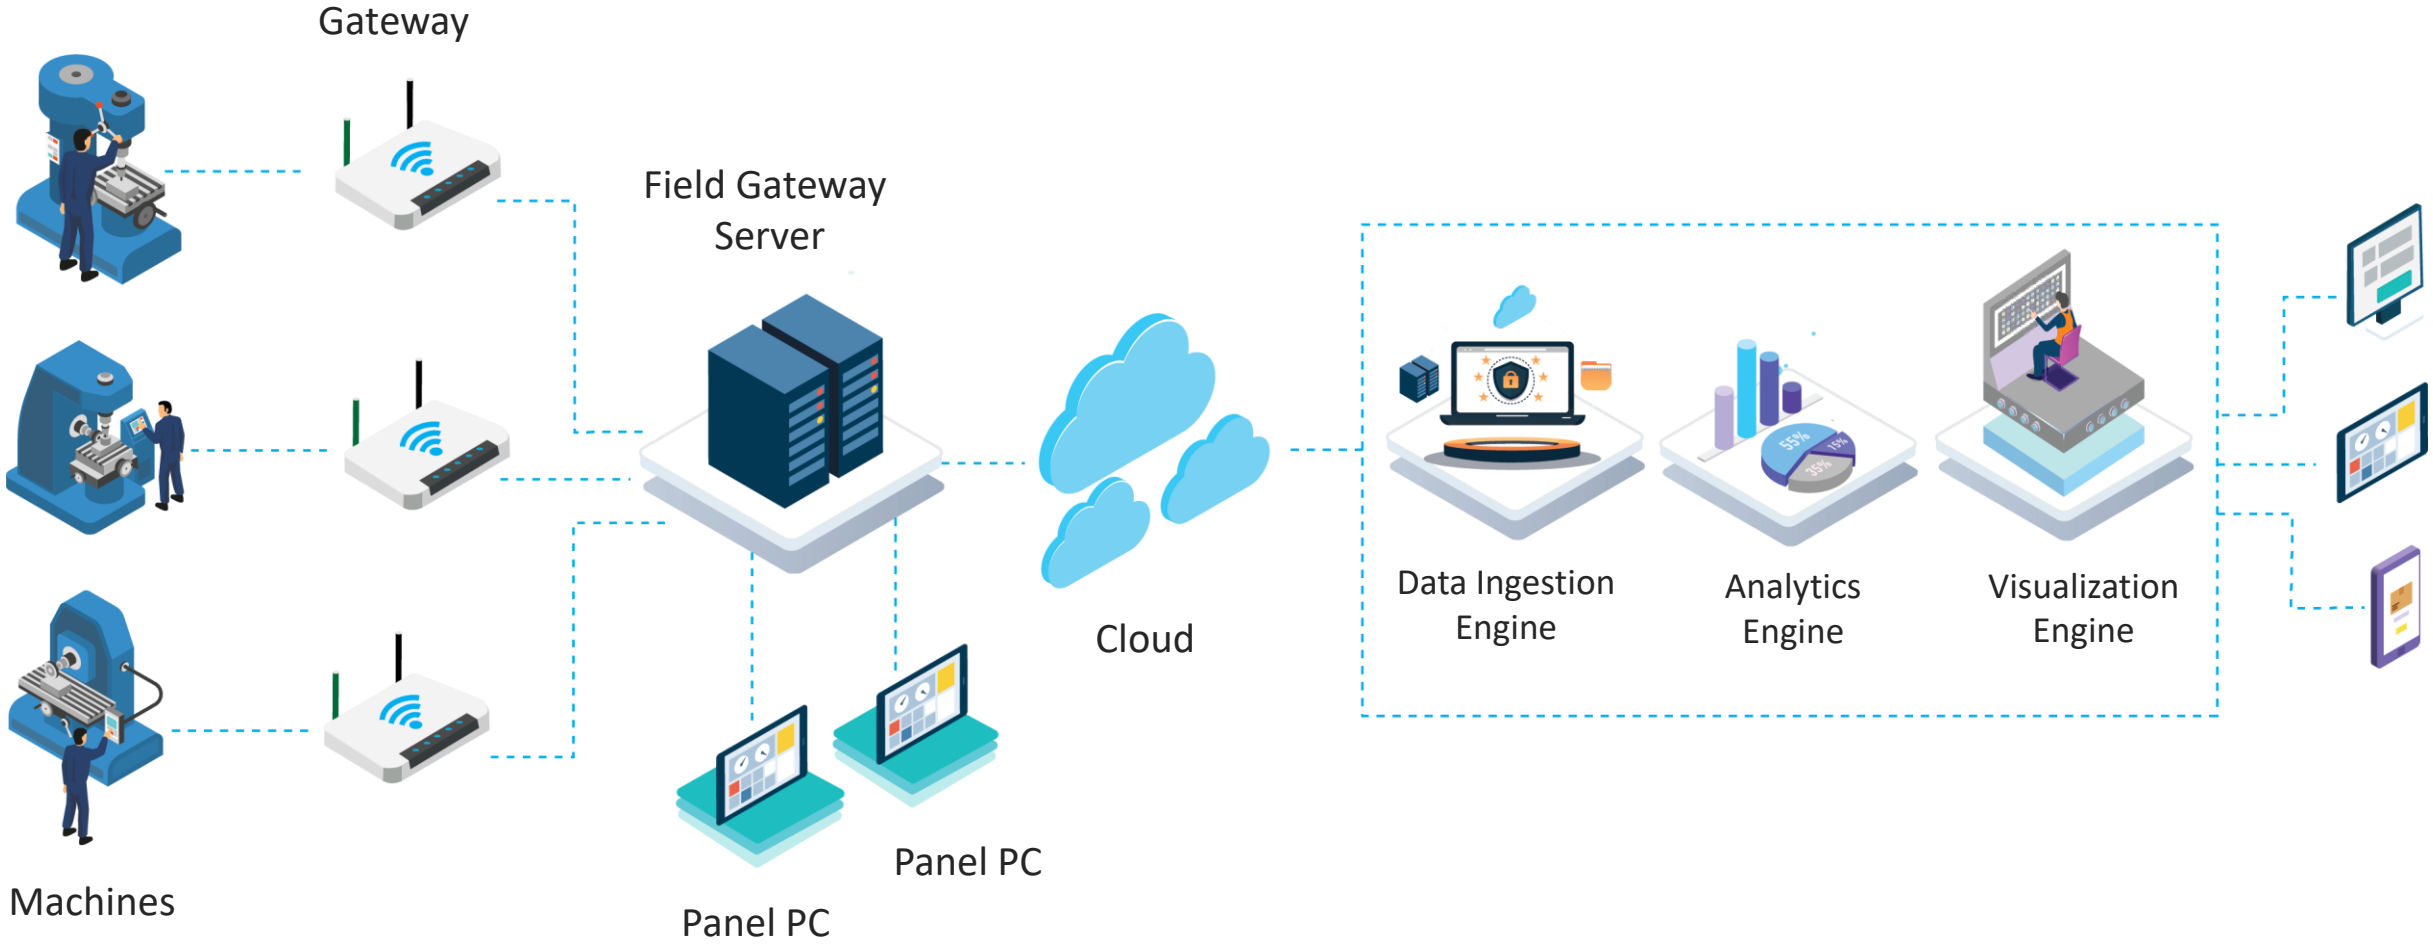

Integration with ERP

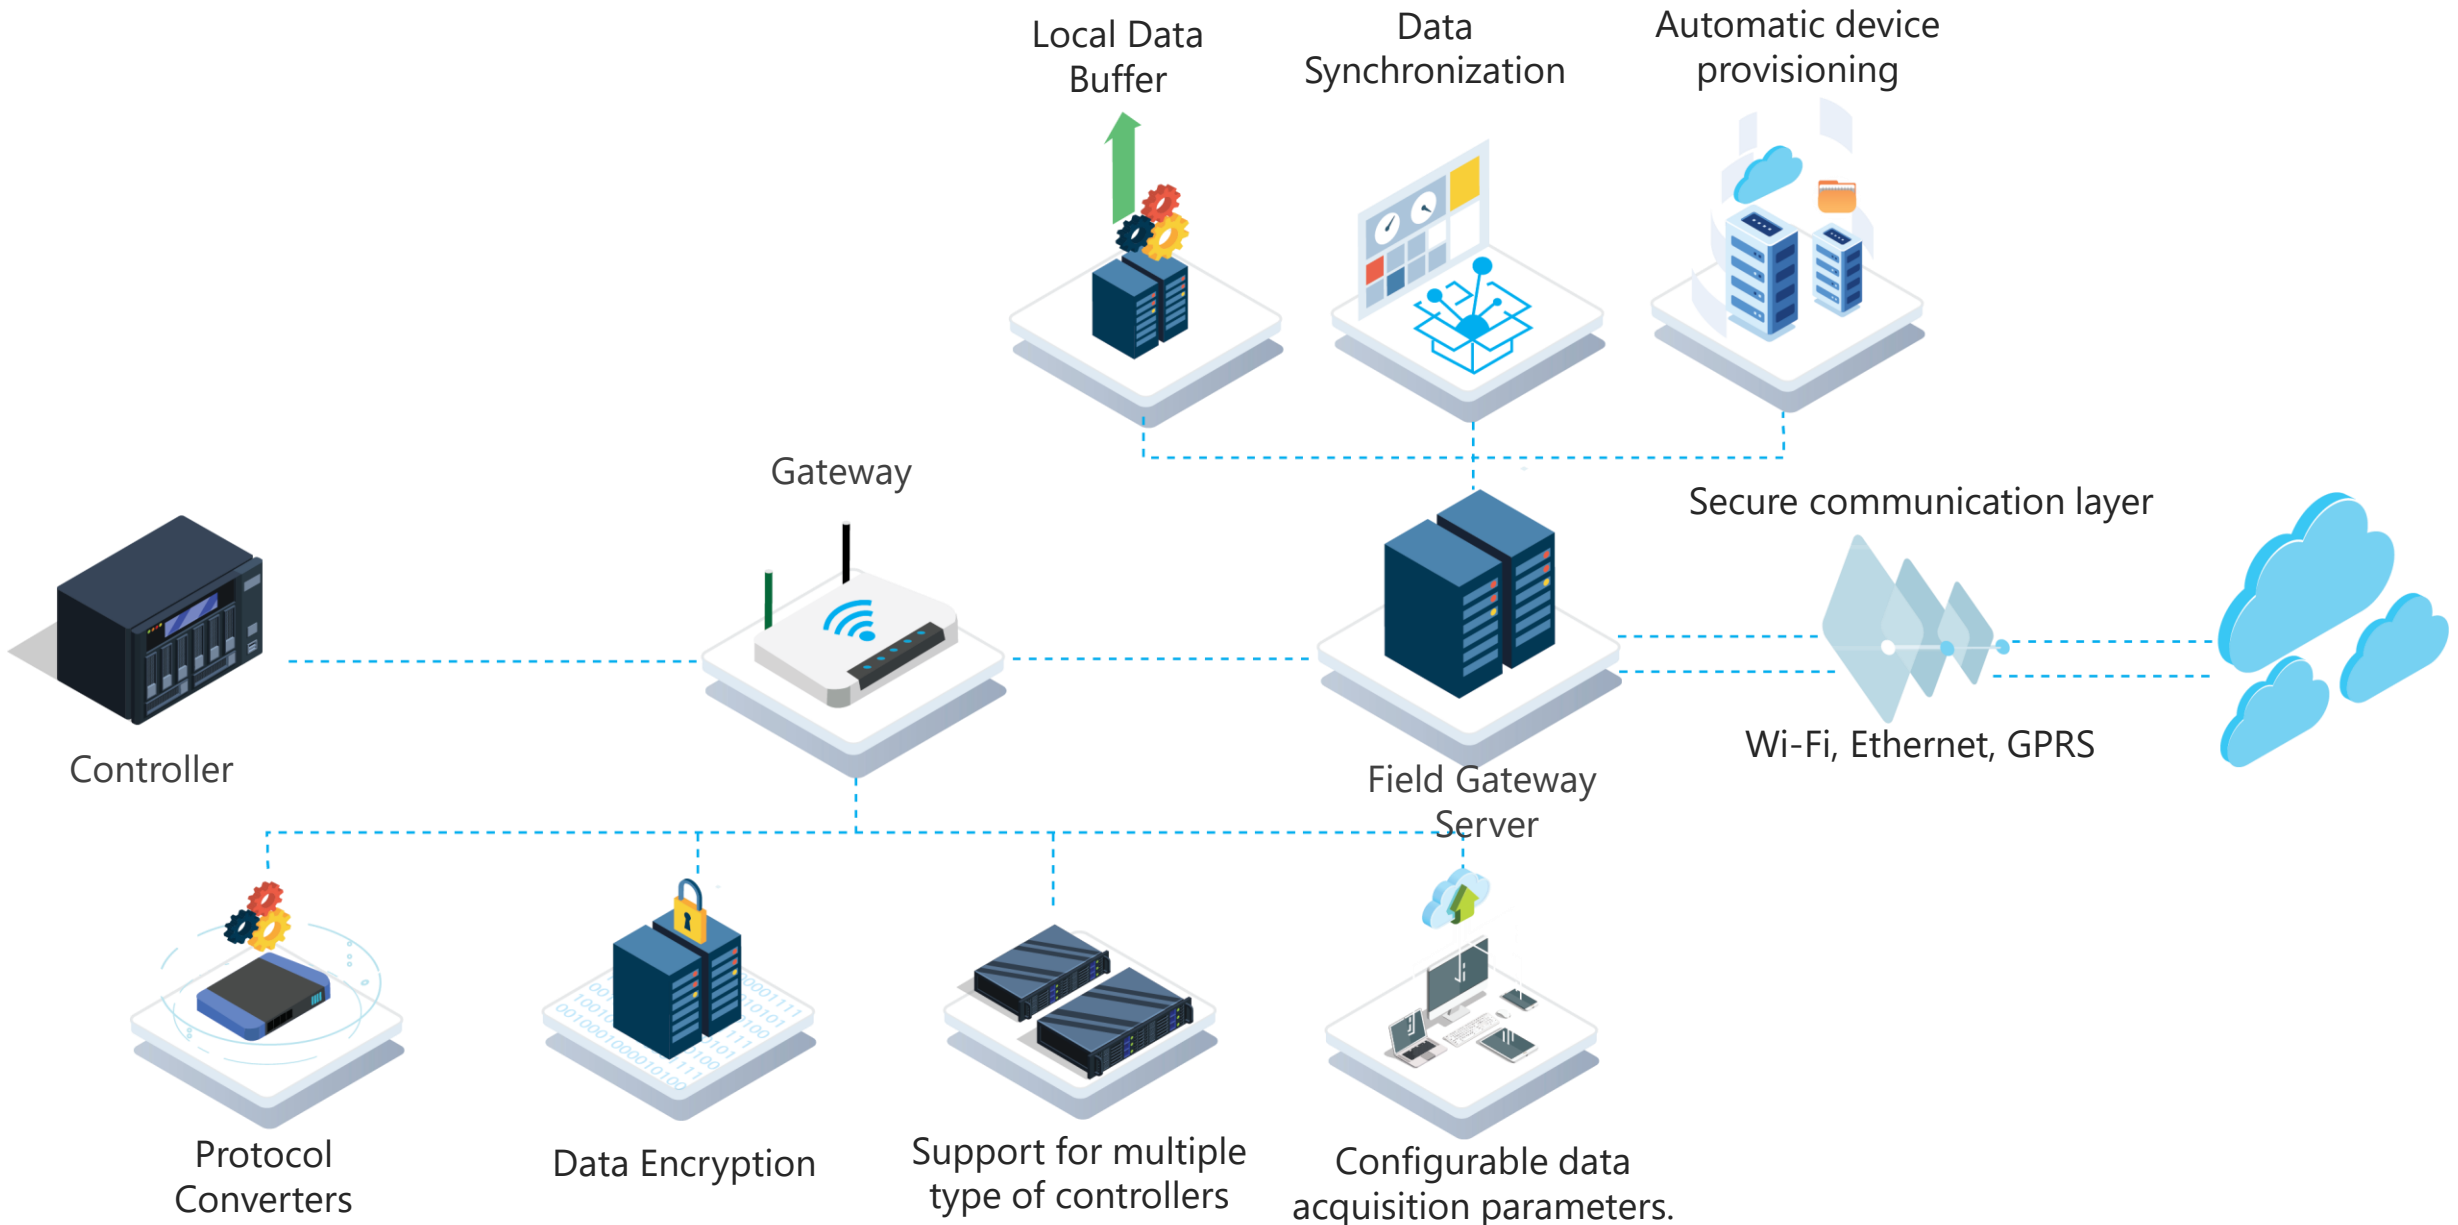

Functional Architecture

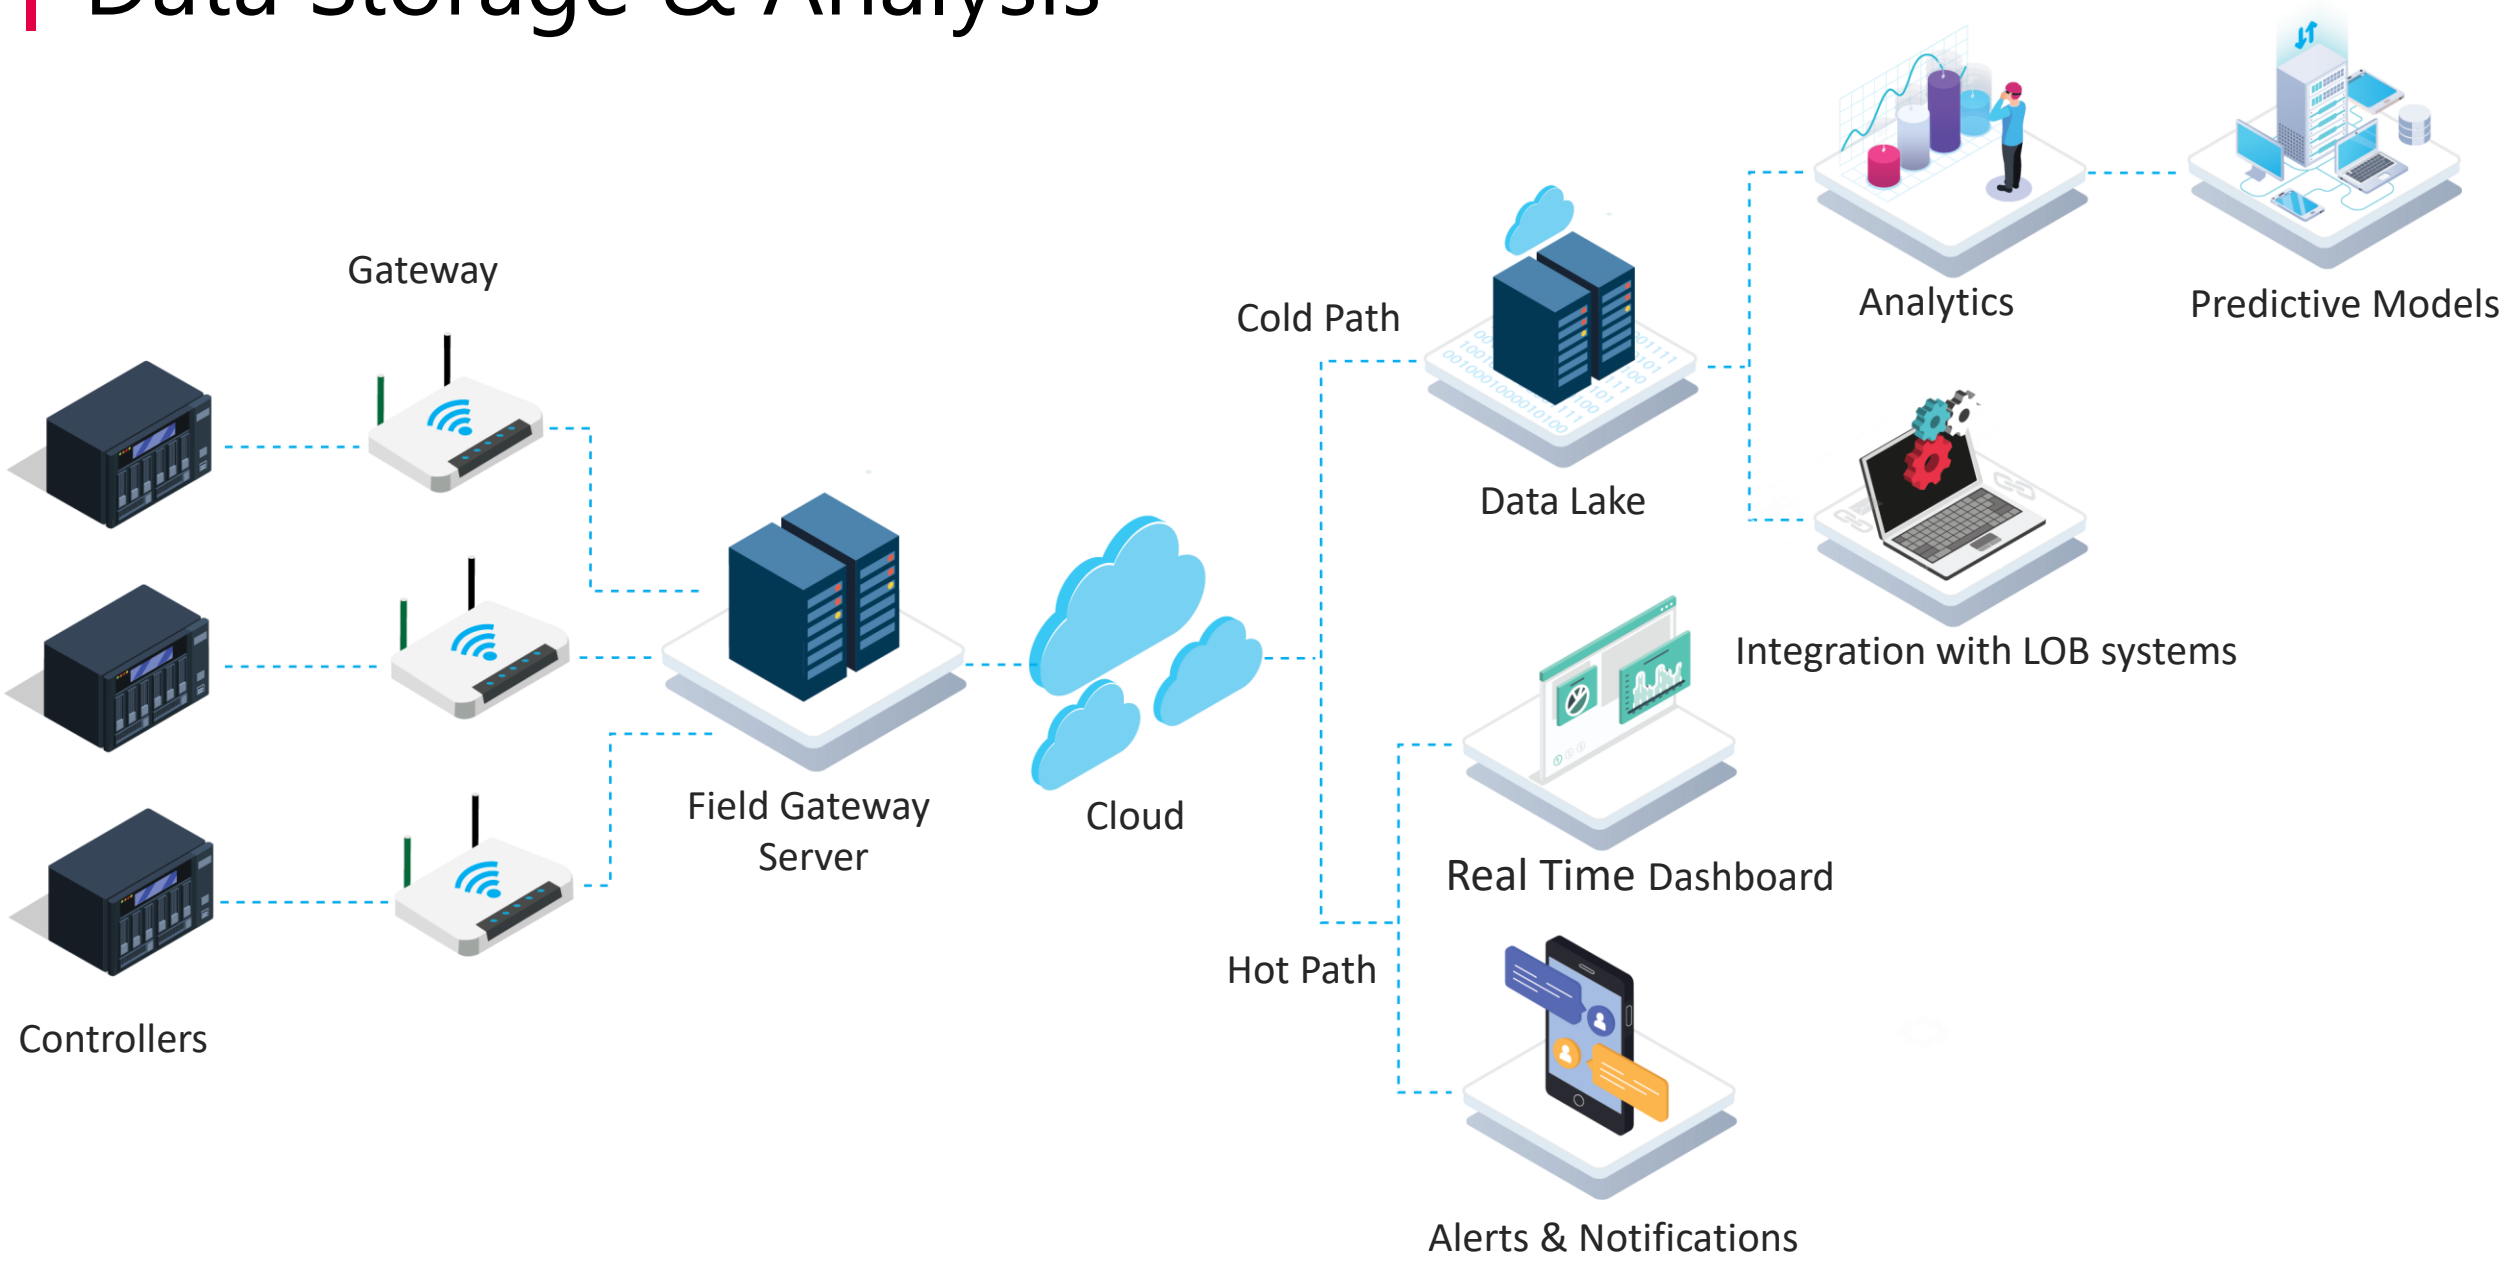

Data Acquisition & Injection

Data Storage & Analysis

Solution Differentiators

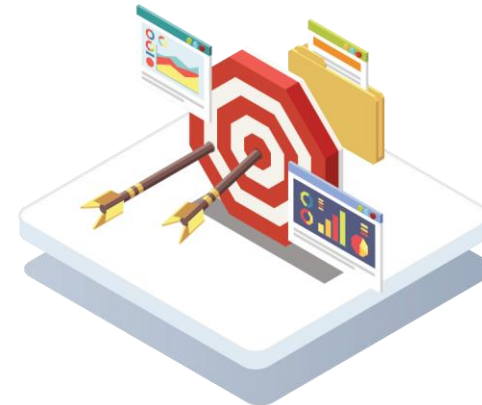

Quick Development

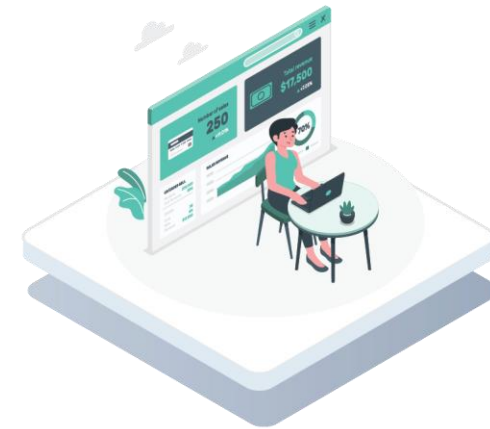

Vendor agnostic solution

Zero disruptions
To current operations

Solutions designed for
targeted industry verticals

Operational
ease of use
