PROGET
Securing and Managing Enterprise Mobility

PROGET

The challenge of managing the proliferation of mobile devices and securing the corporate data to which they have access, is becoming a priority for the Enterprise.

PROGET

Challenges

- Manual tracking, management and maintenance of corporate and BYO devices
- Distribution and maintenance of apps that require support on multiple operating systems
- Protection of corporate data against being lost or stolen

According to research a laptop or tablet is stolen every 53 seconds, and 113 cell phones are lost or stolen every minute.

Rapid evolution of mobile apps: 205 billion mobile app downloads worldwide in 2018.

Ideal Solution

- Accelerate secure mobile deployments
- Secure and manage apps and content across multiple – devices and operating systems
- Securely distribute confidential data
- Define and implement granular mobile policies across different groups and users

- Increase user productivity by granting secure access to email and applications from both corporate and personal mobile devices.
- Mitigate data loss and risk of data breach
- Increase IT efficiency and business agility

Desired Outcomes

- Fast, zero touch enrolment and configuration of mobile devices
- Secure encryption of corporate data
- Devices configured remotely with low touch from IT.
- Secure enablement and management of BYOD.

- Flexible deployment options
- Remote management and control over devices
- Simplify IT operations with remote assignment, and configuration

Proget Software

Extensive advanced functionality provides granular control of both corporate owned and BYOD devices, whilst protecting employee's rights to personal privacy.

Remote configuration and control

- Secure encryption of corporate data on devices
- Significant reduction of time spent on enrolment and configuration.
- Remote end-user support.

Device location

- Highly customisable location services.
- Policies can be simply enforced based upon, location, movement of the device or programmable timed events.

Application control

- Access to applications can be managed through the company store. Enhanced Black/White App listing, ensuring security and reducing risk
- Automation of app downloads and version updates.

Unprecedented level of security and control through user-friendly single console in one tool

Proget + Microsoft Azure
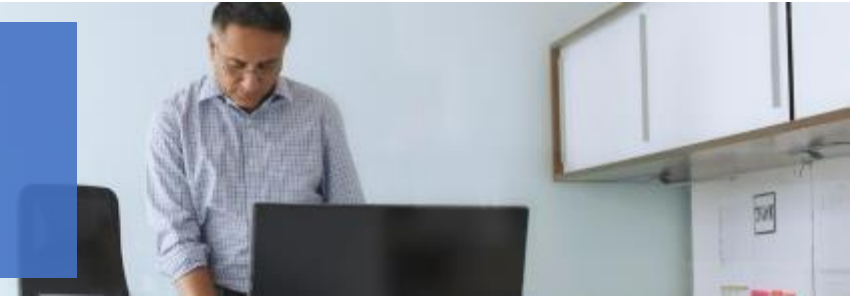

Joint Microsoft and Proget value proposition

Solution Alignment

Quick deployment and installation capabilities

Set up application within minutes.

Fast implementation and configuration of company devices.

Integration with Microsoft environment

All important business services available in one environment.

Flexible purchasing options

Pay as you go.

Licensing per device.

One license for all functionality.
