Delivering Business and Operational Insights with **vuSmartMaps™**

Transaction Analytics for India's largest Retail Payment Gateway Firm

Increased uptime through reduction in failed transactions and real-time view of over 1+ Billion daily business transactions.

“

Our switching system had so many touch points in the transaction processing, and it was really difficult to analyse all those in real-time. With VuNet, this is resolved as it gives a complete end to end analysis for a given transaction thread. Also, it keeps giving real time analysis of each touchpoint like TPS, any transaction drops at a particular touch point, proactive alerts in terms of late responses or drops.

”

Vice President – Switching Technologies, NPCI

About Us

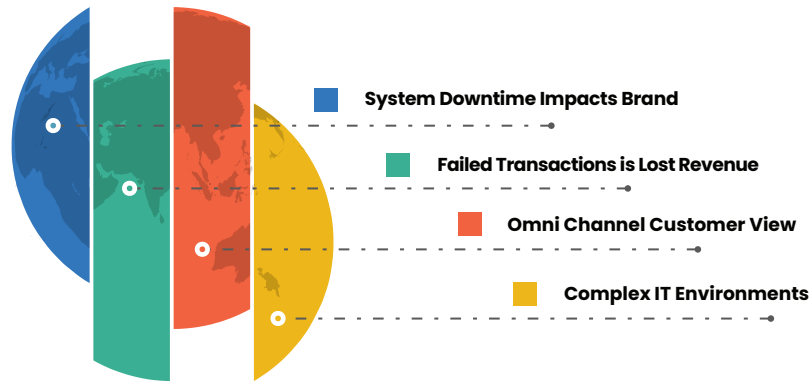

VuNet Systems' is an AI & Big Data analytics company revolutionizing digital transactions. VuNet's award winning Visibility and Analytics platform, vuSmartMaps™ ingests structured and unstructured data from infrastructure, applications and transactions, correlates them through AI-driven techniques to provide contextual performance insights in real time helping organizations reduce failures and enhance user experience.
