

Protected business Cyber Security Fusion Centre

Our Cyber Security Fusion Centre services (CSFC) consist of our SecureFabric SME and Enterprise.

The SecureFabric SME offering focuses on services delivered to small SME's and SMB's with 250 users or less.

The Enterprise offering focuses on medium and large enterprises who requires specific, comprehensive, and a variety of SOC related services that must be packaged accordingly.

What do we do?

We offer cyber security services to smaller organisations that are not able to afford their own SOC team or have the ability or capacity to do 24 x 7 x 365 event monitoring, while our Enterprise delivers advanced and end-to-end services specific to the needs of our medium and large customers.

The SecureFabric SME Offering

The LIT SecureFabric SME service is enabled via Xcitium and the buying options to customers are:

- **SecureFabric SME MDR Plus** - AEP + Endpoint Detection and Response (EDR), as well as a network intrusion detection sensor to deliver comprehensive Managed Detection and Response (MDR)
- **SecureFabric SME MDR Advanced** - AEP + EDR + MDR + IDS and allow for additional security event source feeds, e.g. firewall logs, MS AD audit logs, Office 365 monitoring, and more

Both the MDR SecureFabric services above include 24 x 7 x 365 event monitoring, event and incident analysis, incident management and incident response to significantly improve the security posture for smaller entities that are not able to do so themselves.

SecureFabric Enterprise

SecureFabric Enterprise service is enabled via the Microsoft Sentinel Security Incident and Event Management (SIEM) / Security Orchestration, Automation and Response (SOAR) cloud-enabled offering, or Fortinet's SIEM platform for those customers that select not to have their data stored in the cloud and have the requirement for their data to reside inside their country's own jurisdiction.

This offering provides for most if not all SOC needs, including but not limited to 24 x 7 x 365 event monitoring, SIEM/SOAR administration, content and dashboard management, event and incident management, incident response, threat intelligence and actionable reporting and dashboards that are customized to specific customer needs.

Key to these services is that customers can do pro-active mitigation, rather than to be reactive to incidents already effecting them.
