efficiency

Reputation
towards end
customers

MAT, Machine Analytics Tool enables machine builders from different industrial sector to enter the world of servitization by turning the raw data generated by connected machines into value.

What can you do with MAT?

Monitor in real time the machine and process performance.

Analyze operational efficiency (OEE) and identify bottlenecks.

Analyze the black box of all telemetry variables and critical event history.

Analyze utility consumption as well as raw material processed.

Manage maintenance activities and health status of all machine components, with a predictive approach.

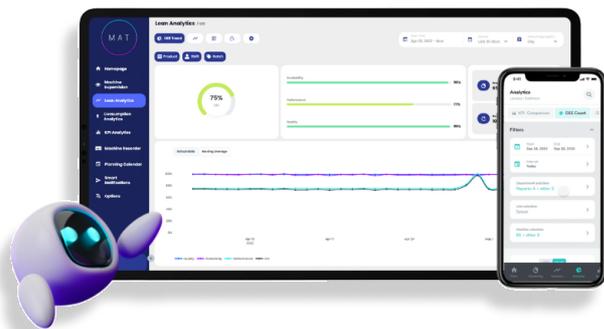

Analyze the most important KPIs and compare them by aggregation factor.

Provide your customers with machine documentation in digital format on the cloud.

Classify machine operators behavior in order to know their preparation level.

With MAT, every OEM can easily build their own Industrial IoT App and offer their customers a world-class service.
