

Actionable Machine Learning for Industry

Fero Labs enables factories to drive profits by leveraging their existing production data through an easy-to-use and scalable machine learning software.

Fero's actionable machine learning technology goes beyond predictions and explains complex patterns to answer the why behind critical problems. The insights gained from data is used by engineers, plant managers and operators to increase yield, improve quality, reduce emissions and eliminate excessive scrap.

Fero performs automated data cleaning and machine learning model generation on Azure. Once deployed, user can access web based dashboards across devices to make mission critical decisions.
