Guest Access Control (GAC)

APPLICATION DESCRIPTION

GUEST ACCESS CONTROL (GAC)

WHY AND WHEN TO USE THE GUEST ACCESS CONTROL SOLUTION

If you want to maintain higher security in your M365 environment this tool will allow you to create Guest accounts based on form request with approval. It will also whitelist the domains for SharePoint Sharing, and Teams communications.

That is why we have created GUEST ACCESS CONTROL (GAC).

ADVANTAGES

GAC lets you easily see who has access to your M365 environment, for how long and the reason of the guest access, who was requesting it and who approved it. Also, your IT team will not spend it's precious time by creating Guest accounts.

TARGET AUDIENCE

IT or Security department, any department who needs to work with external users.

TECHNOLOGY

SharePoint Online, SPOL CSOM, Power Automate, Powershell for AAD, SPO, Teams

CUSTOMIZATION

You can customize the look of the data using JSON formatting on the SP list and other options.

HOW TO DEPLOY

We will send you detailed instructions how to deploy this application, but basically all you will have to do is set up two SharePoint Lists, create few columns, one Flow and then just create a scheduled task on any machine with internet access, that will run the application.
