

Optimize your company's workflows with Nibo.ai

Digital transformation with bots, automation and machine learning.

Cross-departmental collaboration within a company is becoming more and more of an issue. Email and cumbersome process systems are slowing down productivity between departments. Nibo.ai can help you with this, allowing you to apply human-machine-machine-guided automation to all of your company departments and even integrate external ones. The focus is on excellent end user handling and inter-departmental collaboration.

What is Nibo.ai?

Nibo.ai is an easy to use for all employees automation platform that focusses on end-user and cross department automation. On top, actions from applications and from IoT devices (events) can be processed as well. Nibo.ai can automate from simple automation, workflow (multiple steps automation) all the way to whole processes multi-step, human-machine hybrid processes.

Why customers use Nibo.ai

This at-a-glance box

- Human and machine logic combined for better workflows
- Nibo.ai comes on top of your existing IT landscape
- The algorithm learns from the end-user behavior every day
- The data driven solution curates the processes constantly
- Leverage company information across all departments

Cross department automation

- Establish and enhance collaboration across all departments e.g. Finance, HR, IT, Facility, etc.
- Improve efficiency per department by managing and automating incoming requests
- Reduced time to solve multi department involved requests

Boost user's productivity

- Improve users digital experience with one go-to company channel for requests and problems via a Bot
- Deliver instant answers for the user by using end-to-end automation
- Make sure no user request no matter what it is gets lost or forgotten

Data Driven Reporting & Management

- Online granular reporting with root cause insights
- Easy detection of bottlenecks and issues
- Auto suggestion of automation potential

"With Nibo.ai we have the perfect solution to automate all sorts of repetitive work from easy to complex scenarios. Nibo.ai can be used in every part of the company from IT, HR, Finance, Facility and even for our end-customers. The Nibo bot is very easy to interact with and in case Nibo does not have answer automatically it opens a ticket in a Kanban system that can be easily handled by the departments themselves. The best thing about Nibo is that it constantly helps us to become more efficient."

Marc Winkler, CIO, Juventus Schulen

Nibo.ai solution deployed on Microsoft Azure allows customers to take advantage of the cloud, whether hybrid, private or public infrastructure.

Nibo.ai helps to automate
