PENSIONS

IG&H AllVida

The smart admin leader

IG&H AllVida is an admin system designed for life insurers, health insurers and pension providers. In light of the new Dutch pension agreement, this system is ready to service the new pension schemes.

Freedom and flexibility for the pension sector

Advance your pension admin with a cloud-based solution that offers a complete working administration, including all transactions, and is ready to service both existing schemes and the new pension agreement.

IG&H AllVida has three main components

Product configurator

Helps you define and manage product options in a multi-client context and within the limits of legislation.

Core administration

Offers you a rule, event and service engine, along with a set of administration objects and a product model for participant, employer and policy administration.

Product and service catalogue

A standard configurator set of coverages, events and calculation rules. It's compliant by design and covers the configuration of the product configurator and core admin.

AllVida

What makes AllVida uniquely suited for pension administration?

Seamless integration with your existing IT landscape

We provide application programming interfaces (API's) to easily connect to AllVida.

Pre-configured for the new pension agreement

It can handle both the old DB/DC and the new SPR/FPR products. Conversion to the new pension schemes can take place within AllVida.

Compliant by design

All options comply with rules and regulations, we offer internal and external reporting functionalities and legal enforcement support.

100% Uptime

Thanks to its cloud-based nature, the system does not have gaps in availability, staying open for interaction with customers and employees.

Traceability

Transparently showcase your processes. With AllVida audit trail, you can retrace all calculation records and have a convenient overview.

Unlimited scalability

Cloud-based with high processing power, the system can handle an ever-increasing workload. Servers can be temporarily added and removed.

“Our first project, replacing the employer administration, was made possible by combining low code and the ‘hard’ pension administration core of IG&H.”

Frequently asked questions

Can IG&H AllVida accommodate calculations from both schemes?

Yes, the system registers employers and participants, addressing all other boxes like life events, coverage options or different policies. Thanks to its retroactive functionality, these elements are then processed in the correct order, both before and after the transition to the new legislation.

Do I receive records for my annual financial statements?

Yes, the audit trail keeps track of various policies, events, alterations and calculations that come into effect over time. Thanks to a comprehensive overview, you can trace back every step.

What about security?

The system runs in your own cloud environment, allowing you to maintain your security standards. IG&H AllVida is ISO 27001 and 27701 certified.

Is any additional software development required?

No. IG&H AllVida is fully configurable by business rules. Implementing new products, schemes and legislation is done through configuration on a functional level. Simply connect with IG&H AllVida through the standard integration services and use the functionality for different applications. Make changes and add new product schemes quickly thanks to the system's smart design.

What if I only want some functionalities?

IG&H AllVida enables you to run an array of business activities that normally take place at a pension company. It is available in modules. For instance, if you need only a specific functionality such as employer administration from the core admin, this is possible. Purchase the puzzle piece you need or go for the entire end-to-end solution.
