Data & Artificial Intelligence (AI)
Deliver insights that matter on Azure at scale

Core capabilities

► Data & AI Strategy

► Machine Learning & Data Science

► Data & AI Solution Architecture

► Data Engineering

► Data Visualization & Analytics

► Data & Analytics Platform Modernization

Service offerings

Data and AI strategy
Helping business define and execute a Data and AI purpose

► Data platform modernization/migration strategy and roadmap
► Data governance, talent, org and op model design
► How to scale and maintain Trust in AI

Analytics and business intelligence
Enabling insights for business teams

► Dashboard and self-service analytics build
► PowerBI dev and migration
► Data pipelines and modelling
► Analytics migration

DataOps and MLOps
Supporting quality data engineering and data science

► ML Design, Development and Deployment
► CI/CD
► Op Model Design
► Data pipeline configuration/ management
► ML ops/deployment/ management

Big data and data mesh
Enabling the building blocks of data and AI

► Data Engineering for AI, Data Science and Modern Apps
► Value realization framework
► Big data capability map
► Agile analytics process

Data science and ML co-sourcing
Delivering new insights that matter with our clients

► Specialized teams to jointly deliver ML solutions with our clients, providing key skillsets and bandwidth where demand for the service often outpaces capacity of resources

AI solution delivery
Applying AI into client ecosystems

► Document Intelligence
► Recommendation engine
► Intelligent Forecasting and Scenario Modeling
► Virtual agents
► Pricing Guidance and Optimization
