INTEGRATED WITH THE MOST POPULAR ALMS AND DEVELOPMENT TOOLS

qTest[®]Explorer

Record Tests

Intelligent capture technology tracks all interactions from the testing session and automatically creates defect documentation.

Edit Documentation Easily manage and edit the defect documentation. Quickly add annotations and other information

Exploratory Testing Recorder & Documentation Tool

Accelerate Test Automation Reduce your test automation bottleneck by instantly turning a test session into an automated test script.

qTest[®]Insights Actionable, Real-time Test Metrics

Say goodbye to poor software testing metrics and reporting frustrations with qTest Insights – a self-service business intelligence tool cross project testing.

Enterprise Dashboard Reporting

Having a common set of reports across your test teams can be a challenge. Remove the headache of having multiple reports in various locations with qTest Insights shared dashboards.

Visualize Application Health

qTest Insights gives you the ability to build any kind of report you want, exactly the way you want it through engaging heat maps, interactive charts, and drill drown reports.

qTest[®]Launch Centralized Test Automation and Machine Management

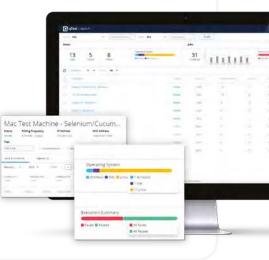

In a development world moving at the speed of DevOps, qTest Launch provides a scalable test automation strategy and a central location for kicking off automated tests and tracking results.

Scale Test Automation

By centralizing automated test execution, qTest Launch enables enterprises to scale test automation from hundreds to thousands of test runs across different test machines.

Increase Automation Coverage

With qTest Launch, QA teams can centrally configure automated testing across open source, commercial and custom-built automation solutions all connected to ALM tools like lira Software.

qTest[®]Scenario Enterprise BDD for Jira

gTest Scenario is Jira add-on for enterprise teams practicing Behavior-Driven Development that facilitating test scenario creation and ensuring feature traceability to Jira issues.

Supercharged BDD Collaboration in Jira

With gTest Scenario's autocomplete, BDD teams can better reuse previously implemented Cucumber steps or outlines to streamline feature and scenario creation.

Source Code Traceability

qTest Scenario directly stores all feature files into private Git repositories like GitHub, GitLab and Bitbucket to standardize feature files and scenario steps as code.

Hear From Some of Our Satisfied Customers

One of the reasons I chose qTest is because qTest integrates with Jira. With qTest, we're able to take full advantage of the traceability of Jira, which helps with compliance and also improves the overall quality of our products. The qTest-Jira integration has been critical to our success as we go through our digital transformation.

Office DEPOT OfficeMax

We were able to quickly migrate all our test cases from HP Quality Center to qTest and get the team up-and-running in just a few weeks. The implementation process was excellent.

globalpayments

When we had a legacy ALM, the automation scripts were standalone and there was no traceability. qTest's integration with the automation tools has helped us develop a better approach for our requirements traceability matrix
