- Convenient tracking of symptoms, vitals and medications
- Automatic care plan reminders and alerts functional learning

CARE TEAM BENEFITS

- Responsive care through virtual care support and alerts
- Improve patient adherence to care plans and treatment
- Reimbursable digital platform with integrated workflow

MOZZAZ CHRONIC DISEASE MANAGEMENT

CHRONIC DISEASE

Over 160 million people receive treatment for the five most costly chronic conditions, with costs of care exceeding \$750 billion in the US in 2017. Often these patients have co-morbidities and are the super-utilizers of the health care system. This is further aggravated if they have behavioral or cognitive issues. 75% of doctors and nurses find that patients often have difficulty following the prescribed diet and lifestyle changes, and two-thirds of patients fail to adhere to medication and treatment plans.

“Mozzaz provides our nurses and clinical teams with important information on our chronically ill patient’s vitals and state of health. We have become more responsive in their care.”
