

You  
want to  
reduce your  
carbon footprint  
and contribute  
to the energy  
transition

**elow**

Together let's build an ecosystem to accelerate  
the growth of responsible energy

**elow**

### Reduce your digital carbon footprint

By involving all your employees in the «carbon footprint» component of your CSR policy, by providing them with the means to act on a daily basis and be full players of the energy transition. Install good digital practices and show the way to «Green IT».

### Thanks to a Windows App codeveloped with Microsoft

By encouraging responsible energy consumption with the help of the «carbon management» features of the application and by relying on a periodic report that will allow you to quantify the carbon emissions avoided by all your employees at the office, in home office or in a coworking space.

### Contribute to the preservation of the planet

By covering your electricity consumption with green electricity, while supporting the players in the renewable energy sector in our territories and by participating in the creation of a virtuous ecosystem that will accelerate the production of renewable electricity in the world.

“An opportunity to reinforce your  
social commitment and iétal  
and act to preserve the climate”
