at-a-glance

BACKUP MANAGE REPLICATE **RECOVER** PHYSICAL VIRTUAL CLOUD

Ease of Use

Add a profitable new line of business with low barriers to entry, recurring partner revenue with little needed interaction. Fast and easy to manage way to ramp up an alternate stream of income.

Features

- Set it and forget it
- Automatic backups every 8 hours
- Easy sync to add or remove users
- Simple to add additional services
- Snapshot view of all services and activity in Overview screen

Security

StorageCraft Cloud Backup ensures that all SaaS application data is backed up, protected and ready to restore from anywhere. Better safety and stability at a lower price.

Features

- Protection against user errors
- Protection against system errors, data overwrites
- Protection against malicious actions
- Data status verified with automated audit reports
- Data secured in Amazon S3 storage sites

Recoverability

Due to the cost of backup services and long-term retention, SaaS application vendors often choose to only provide the most basic backup and recovery functions.

Features

- Recover data any time
- Recover from anywhere
- Restore individual files or folders
- Recover data from previous months and years
- Verify basic backup data with reports

Customization

Not all data is equal. Partners can choose the level of protection that makes the most sense for different kinds of data. Adjust on the fly, restore from anywhere.

Features

- Partner optimized
- Add & remove users
- Add & remove services
- Backup only needed data
- Select individual customization by SaaS application type
